About this patch...

This application updates the THINK Project Manager (version 7.0, 7.0.1, or 7.0.3) to version 7.0.4, fixing the following three bugs:

• bug was introduced in System 7.5b5 that caused the IAC mechanism between the THINK Project Manager and the THINK Debugger to fail under certain conditions. We have worked around the problem.

• nder certain conditions the THINK Debugger would crash if the tab width for a file was 0. The TPM has been updated to use a tab width of 4 under these conditions.

• ource file names longer than 29 characters resulted in problems when using the PowerPC compilers in the CDK. This has been fixed.

This patch cannot work properly while virus detection software is running.   Please make sure that you have disabled any virus detectors before applying the patch.
