

EIMS Server 3.1.3 to 3.1.4 patch

Please make sure your mail server is secured against relaying, detailed instructions on how to do this are available at <<http://www.eudora.co.nz/support.html#relay>>

For all support go to <http://www.eudora.co.nz>, or email eims@eudora.co.nz.

Changes to EIMS Server 3.1.4

- mapReadErr when opening prefs now creates new resource fork
- Fixed logs not logging when no log limit or minimum disk limit was set
- Make sure MIME boundaries longer than 70 characters are never created
- If there is a problem writing to a mail queue, messages are now diverted to temp mail
- Fixed connection timeouts (particularly EIMS Admin timeouts) if RTC time went backwards by even a second.
- Fixed crashing bug when EIMS could not get access to an Incoming Mail X file.
- Changed HGetVol to PBHGetVolSync to get the volume reference instead of a working directory reference.
- No longer use 0 as a volume reference number for logs.
