The EndNote Add-in Localizer
For Non-English versions of Microsoft Word 6 and 98

If you are using a non-English version of Microsoft Word 6 or 98, you should use the Localizer to enable EndNote to correctly install the Add-in in Word's Tools menu and function correctly. Run the Localizer, as described below, BEFORE you install the EndNote Add-in.

1. Double-click the Localizer document.
    That should open the document in Microsoft Word. (Open the document as "read-only" if prompted.)
2. With the Localizer document open in Word, choose *Macro...* from Word's *Tools* menu.
3. Select *EndNoteAddInCheck* from the list of macros.
4. Press the *Run* button.
    The macro will run and you will be notified about how the preferences file was modified.
5. Close this Localizer document and quit from Microsoft Word (choose *Quit* from Word's *File* menu).

Note that the Localizer changes the ENADDIN.PRF preferences file in the Preferences folder of your System Folder. If you ever delete that file, or install the EndNote Add-in on a different computer running a non-English version of Word, you will need to run the Localizer again.
