

Fact Sheet

.EU Domain Registration Service

Network Solutions* is an accredited registrar for the .eu top level domain. The .eu domain extension creates a new “Internet space” and a practical way for businesses to create a pan-European identity for their online markets.

RESELLING .EU DOMAINS

Some of your large national and multinational companies may have already secured their .eu domain name in order to protect the value and reputation of their online identity. But other companies may not feel they need to secure a .eu domain name when they already have an established, well recognized country-specific domain. Help these eligible customers realize the value of registering for a .eu domain.

Protect Online Identity

It is predicted that the .eu Internet space will be as recognizable as .com in a couple of years. This means any eligible customer with an Internet presence needs to take steps to prevent the unauthorized use of their company names and brands in Europe.

Expand Market Reach

The European Union is currently the world's largest economy, and is expected to grow over the next decade as more countries join the union in 2007. The .eu extension offers eligible businesses the opportunity to dramatically expand its market reach with a single domain name purchase.

Unify European Presence

Corporations with online operations in several member states of the European Union can streamline their efforts by forwarding their European ccTLDs (country-code top level domains) to a single, pan-European Web site.

.EU PRODUCT FEATURES
