

Oric/MacOS

Current Version

v1.5 - April 24th, 1999

Oric/MacOS is an Oric emulator for the Macintosh.

Oric/MacOS emulates an Oric 1 and an Oric Atmos. It supports full sound and almost perfect compatibility with a real Oric. It includes ROM files for 6 languages as well as assorted different video modes.

oric/MacOS is based on Euphorix for Unix by Fabrice Frances. It has, however, been rewritten substantially to take advantage of the Macintosh - all that really remains of Fabrice's original code is the CPU and PSG emulation.
