

TO8/MacOS

Current Version

v0.7.0 - November 14th, 1998

TO8/MacOS is a Thomson TO8 emulator for the Macintosh.

TO8/MacOS, like its partner MO5/MacOS features reasonably accurate emulation and full sound. The emulator uses an AZERTY keyboard layout, just like the original machine. Also, the user interface can quickly be toggled between English and French.

A screenshot is available on the WWW.

TO8/MacOS is currently under development by a team of several people, lead by Gilles Fetis. There has been little development recently, but this is mainly because the emulator is now fairly solid and most programs run without trouble.
