Smashing Windows II

Current Version
v1.0.1 - September 21st, 1998

Smashing Windows II is a simple space invaders game for the Mac.

What makes this game unique is the ability to choose between different sets of sprites. You can have Netscape shooting the evil MSIE; Apple shooting the evil Windows; and so on. There are also two different backdrops to choose from.

A screenshot is available on the WWW.

The original Smashing Windows was the first program developed by me for the Mac. It was inspired by a screensaver for the PC containing a Windows logo shooting at Apples. Smashing Windows II is basically a PowerPC Native version of the original Smashing Windows, with a few small additional features..
