Read Me First!

All CDs should contain the following folders:

- *Visual Basic 6 Update*
- *Windows Library Update*
- *Internet Explorer 5.X*
- *Web-O-Rama Standard 7.X Full* (latest release version)
- *Web-O-Splash*

If you have purchased Web-O-Rama Professional, *the CD should also contain the following folder:*

- *Web-O-Rama Pro 7.X Full* (latest release version)

Description of folder contents

- ◆ *Visual Basic 6 Update* is a Microsoft update to system files necessary for smooth installation of *Visual Basic 6* programs. Double-click *vbrun60sp3.exe* to install. Installing this file is particularly important if you are using *Windows 95.*
- ◆ *Windows Library Update* is a Microsoft *recommended update* to certain important system files. Double-click *SPEU.exe* to install.
- ◆ *Internet Explorer 5* is version 5.0 or 5.1 of *IE5*. Double-click *ie5setup.exe* to install. If you are presented with a screen that implies you need to connect to the Internet and download *IE5,* this is not actually the case. Choose the components you want to install and click through the screens. The installation screens are not terribly intuitive.
- ◆ *Web-O-Rama Standard 7.X Full* contains the full installation of *Web-O-Rama Standard* (the standard version does not include the "Web View" tab). Install by running *setup.exe* from the CD (Start → Run → locate *setup.exe* on CD) or by copying the contents of *Web-O-Rama Standard Full* to an empty folder on the *primary partition* (usually C:\) of your hard drive and double-clicking *setup.exe.*
- ◆ *Web-O-Splash* is a small utility designed to disable *Web-O-Rama*'s *splash screen* from outside the program if *Web-O-Rama* locks up the first time you try to it. A few people have reported this problem. It seems to occur most often on machines running *NT 4* with older graphics cards. *Web-O-Splash* will not run if you have not installed *Web-O-Rama. Web-O-Splash* requires no installation; merely double-click the .exe file to disable *Web-O-Rama*'s *splash screen.*
- ◆ *Web-O-Rama Pro 7.X Full* (if you have purchased *Web-O-Rama Professional*) contains the full installation of *Web-O-Rama Professional.* See *Web-O-Rama Standard Full,* above, for installation instructions.

If you are using *Windows 95,* it is recommended that you install the supplemental files in the order below, rebooting after each installation whether the computer asks you to or not. It is also a good idea to delete the contents of *Windows \ Temp* before installing any program and between installations of the supplemental files.

- *Visual Basic 6 Update*
- *Windows Library Update*

- *Internet Explorer 5* (needed for *Web-O-Rama Professional*; otherwise, install only if you have problems installing or running *Web-O-Rama*)

If you already have *Internet Explorer 5,* running the *IE5* installation will only confirm that you have the latest files and will not alter your current installation if it is up-to-date.

If you are using *Windows 98* or *Windows 98 SE,* installing the above files is not necessary unless you have problems installing or running *Web-O-Rama.*

If you are using *Windows 2000,* your system files should be current and you should not have to install the files listed above.

Users of *NT 4,* with service pack *SP1, SP2,* or *SP3* installed, should probably install all of the above files (as well as *SP3*). If you have installed *SP4, SP5,* or *SP6,* you probably do not need any of the above files. *Web-O-Rama* will not work with versions of *NT* lower than v. 4.0. You need to be logged on as *Administrator* to install *Web-O-Rama* on *NT.*

A *very small* number of people have reported being unable to successfully install *Web-O-Rama.* If this happens, please contact me immediately for a full refund.
