

LADIES AND GENTLEMAN, I HAVE DONE IT!!! THE COMPLETE MAHELL PACKAGE HAS BEEN COMPLETED AND SENT TO YOU FOR YOUR ENJOYEMENT!! HAVE FUN (HE HE HE)!!!

Installation:

Install all of the Sequences onto your "QuicKeys Sequences Folder" and the KeySet onto your "QuicKeys KeySets Folder" and open up your QuicKeys menu. Once it appears on the screen, go to the "Sets" menu on the top and click on the menu on the bottom with two different colored arrows pointing up. You will then see all of the macros. Press (Command-A) and then press (Command-C) and all of the macros will be copied. Then go to the "Sets" menu and click on "Universal" and then hit (Command-V) and paste it there. If you want to add a KS (KeyStroke) double-click on the macro and put in your KS where it says "Keystroke" When you are finished will all of this crap, get onto AOL and get to work. Have fun!!! Here are directions for your use on BCHELL.

Directions:

Chat Bomb, Paste Scroller, and Scroll Hell: These 3 items are all basically the same. If you get screwed with in a chat room, press the KS (KeyStroke) Button and Chat Bomb and Scroll Hell will start scrolling for a very long time. To stop scrolling, press (Command- ".") and the process will be terminated. With Paste Scroller, copy a term (explicit preferably) and press the KS. The same thing will happen.

Roll Hell: This macro will roll dice for a long time. This is probably the least favorite of any macro because it is damn annoying. If an IM interrupts, the process will be terminated, or you can press (Command-".").

Drive Hell: This macro will not work on Mac computers because it only works on PC's. Basically, it drives a PC crazy. Just copy the name of the

victim and press the KS. Be careful with this macro, you can get some real PC enemies.

Fake Forward: This macro pretends to forward your mailbox to someone else, but it is really kind of like a Mail Bomb. Just copy the name of the victim and press the KS. It is kinda' lame.

IM 12/22 People: This macro will Instant Message 12 or 22 people. Just copy their names and press the KS. This is really lame and there is no point to this.

Fast Text Manip.: This macro is a toughy. If you have QuicKeys 4.0, it will work. Otherwise, screw it. Copy the victim's name and hit the KS and something bad will be said about them, using their screen name. It is neat.

IM Bomb: This is a great one!! Copy the name of the victim and hit the KS and they will get never-ending IM's (well, they end sooner or later). It is damn annoying.

Mail Bomb, Chris Bomb, and Mail Bomb Now: These are the best macros. If you make enemies with someone, and you want to erase their box, just copy their name and hit the KS, and they will be mailbombed. It takes about 10 minutes, so go and take a shit, while the macro is running. Any incoming IM's will ruin this. To halt the process, press (Command-".").

Mail Forward, and Mass Mail: These are neat macros. If you have a full "New Box" and you want to send the whole thing to someone easily, just copy their name/names and hit the KS. It will take a long or short time, depending how much mail you have.

Mass Mail Read/Sent: This is the same thing as Mail Forward, and Mass Mail, except you forward your Read or Sent mail. Do the same thing as you do with the one above.

Beavis, Cool Ceo, Garfield, Skull, Spike, Lady, Leaf, Middle Finger, Simpsons, and You:

These are all picture macros. To do them, press the KS in any chat room and if nobody else's dialoge interrupts your's, then you will see a picture on your screen. If and incoming IM's are sent, they will stop the process (I like these macros).

I have worked long and hard on this project and if you care to reimburse me, (please do) send mail to me at BtrCheddar. If you dont want to send me files, and you are acting like an asshole, at least E-mail me, (that is the least you can do). Have a great time.

From,

BtrCheddar

P.S. I do not take any liabilities or responsibilities for any shit that you get into with this program, and I advise you not to use it!!! (He he he he).
