

Features

- Unique ID: This tool has a unique menu ID, so you should be able to use any tool with it. Well, except for the TOS Tool, but OJ is a dumbass. Well, he isn't a dumbass, just kinda dumb.
- Unique Submenu ID's: All Submenus should work with those from another tool. If they don't, find me and i'll fix it in an update or something.
- Lots of Porn: Not really.....=P
- Weird windows: AJ first did this....he just copied the WDEF resource from some Aaron-like extension and stuck it into his tool. I could of done this, but i decided not to....if you want, i'll stick it in the next version.....blah....
