

## Final Notes

- Thanks to Lith, Kaos & everyone else for their contributions.
- The exact opposite of thanks to No0n and TOSGod for using the code from the original Mystery Menu Tool and calling it their own. Even macwarez types should have more respect then that. Treat these two accordingly ;)
- I know that many of you are disappointed to see the "Go to Macwarez" options removed, but for technical reasons I had trouble getting them to work with the new tool code. However I promise to have those options back and \*better\* then ever in the next release of the tool.
- If you can get in touch with me, give me suggestions for the next tool! It was mainly user suggestions that brought about the changes in the Mystery Tool 1.4
- Finally thanks to AOL for existing ;)
