

New Features

1.0 - First public release. Forgot to check that all the submenu's display the correct form when enabling/disabling command keys.

1.1 - Fixed submenu error, now each one displays the correct form.

1.2 - Fixed yet another submenu error. Added more area's under the Access submenu. Also added my own area.

1.3 - New and Old board forms were swapped, fixed. Added "Restricted Profile" option, which allows you to create a profile with the word "FUCK" in it. Also added "Delete Profile" option, in case someone threatens to report your profile. Changed forms from DB19 to db00, to avoid conflicts with Mystery Tool, and other's using DB19. Got sick of ppat's, deleted them. Finally figured out how to change a window type; changed Rec/Lib and Token dialogs into movable windows. NOTE: The concept of a movable Rec/Lib and Token dialog was by Fibra, but these were created by me.

Trial and Error sucks =(

Added Text submenu. Added Fonts, Size, Style and Color options. This is the first time EVER that this has been done, and I did it =P~ •DO NOT ABUSE THIS MENU!!• If you use this menu, you MUST give me credit, after all, it took a little while to fix it up, and many system crashes before I figured out the correct way to do it. Changed "Welcome, (YourSN here)!" window PICT to ppat to cut down on tool size. I can make a patch if you want the skeleton dude back.
