SERVER ATTACKER 1.0a by:

GNU

This script will send lots of fake requests to a server!
This will cause the server to work mainly at those and
disregard real requests! :)
The only thing I want from you is that you bomb the default server in the
app! ;-)
The source code is available by opening the application in the script editor!
The source will not be available in future versions!
Please contact me @ pri@algonet.se before stealing the code!
