

# REPLACING FOOLPROOF!!

Replacing Foolproof is EASY!! First run the Disk Unlock Utility and click the icon a bunch of times (sometimes double clicking doesn't work). Then quit that, and run the Foolproof Replacer. Again you will be prompted to type in the EXACT

name of the hard drive (EXACT being the keyword, capitals DO count). The program will quit automatically when it finishes (which takes like 1 or 2 seconds). Reboot. Foolproof and other extensions will load! The computer is locked again. There is NO evidence that you ever removed Foolproof!!! You could have leached every program off the

computer, and theres NO evidence!!
