

What is the Disk Unlock Utility?

he Disk Unlock Utility is a great little program. I did not make this program, in fact it was created by those dicks from the company that made FoolProof. Who cares though, because it helps us, the hackers. Just run it, and a dialog containing the name of the hard drives will come up. Since the people who made

Foolproof were morons, the unlock button does not work. You must click a few times on the name of the hard disk, and then it will unlock.

NOTE: The Disk Unlock Utility is only necessary to Replace FoolProof, to put items into the trash, and to copy files ONTO the hard drive. You can still remove Foolproof, and copy files from the hard drive to a floppy.
