REMOVING
FOOLPROOF!!

This program bipasses the Foolproof SuperInit which

makes Foolproof load even when the Shift key is pressed.   To

remove foolproof from a Macintosh computer, simply run the

Foolproof Remover.   A prompt will come up, asking you the

XACT name of the computer's hard drive (EXACT being the

keyword, capitals DO count).   When the program finishes it

will quit automatically.   Then Restart the computer.   Foolproof

and other Extensions will NOT load!!!   The computer will be

FOOLPROOF FREE, allowing you to do whatever the hell you

want! This program bipasses the Foolproof SuperInit which

makes Foolproof load even when the Shift key is pressed.
