

ack App is a small hack that generates registration codes for 84 Newton applications! It is a NOS 2.0 Only application, but its previous pre-releases can run on NOS 1.3, since quite a few of the apps it generates codes for are primarily for improving OS 1.3. The last pre-release is included in this archive.

To use the program, just run it, make sure the name you want to generate a code for is correct (it will retrieve your name from your Owner Info), select the app you want to generate a code for from the picker, and press the "Generate" button. Hack App will display a code that was generated for the chosen app.

You can also generate a list of all registration codes that will appear in your Notepad along with the user name used to generate the codes!

Please distribute this application freely!!!
