

A Cheesebox (named for the type of box the first one was found in) is a type of box which will, in effect, make your telephone a Pay-Phone. This is a simple, modernized, and easy way of doing it.

Inside Info: These were first used by bookies many years ago as a way of making calls to people without being called by the cops or having their numbers traced and/or tapped.

How To Make A Modern Cheese Box

You will need:

1 Call Forwarding service on the line

1 Set of Red Box Tones

The number to your prefix's Intercept operator(do some scanning for this one)

How To:

After you find the number to the intercept operator in your prefix, use your call-forwarding and forward all calls to her. This will make your phone stay off the hook (actually it now waits for a quarter to be dropped

in). You now have a cheese box.

In Order To Call Out On This Line: You must use your Red Box tones and generate the quarter dropping in. Then you can make phone calls to people. As far as I know, this is fairly safe, and they do not check much.
