Automatic Connection

Sometimes you just want to connect; no helpers, no documents, no telephone numbers, just launch and connect. You can achieve this by checking the "Auto" checkbox in the "Session Settings" dialog box and saving that configuration as the "Default Settings". In fact, you can make Black Night automatically connect, wait for a call, or initiate a dialback sequence.

This same setting applies to Resource Helpers and Documents, and will take effect whenever a Document is opened or a Resource Helper is selected from the "Helpers" menu.

What is Dialback

Dialback is a two stage connection sequence used where security is an issue. With dialback, Black Night will make a call, wait for the call to be cleared, and then immediately go into "Wait for a Call" mode. You should only use dialback when your host knows it's supposed to call you back.
