## THE BEAGAN BOX

Concept & Design:

Beta Testing:

BLACK BOX

LORD REAGAN

Background

-----

Well, this box was dreamed up one night at about 2 am when so P/HARM members and myself were biege boxing and stealing photoelectric cells. Inside one of the HUBS we found a 1000 feet reel of cable. Wondering what I could use this for, I came up with the BEAGAN BOX !

## MATERIALS

-----  
two (2) Alligator clips  
cable (400' or longer is recommended)  
one (1) RJ11 phone jack

## Construction

-----  
The BEAGAN BOX is one of the few boxes that doesn't require millions of diodes or resistors or anything that costs a lot of money. Here's what you do, first, go out and find some cable (or buy it, if you can't find a HUB). Second, strip both ends of the cable. Next, attach alligator clips to the wire on the outside, next attach a RJ11 phone jack to the inside wire (the 2-inches of wire that stick up in the middle of the reel). You know have an official BEAGAN BOX !

## How to Use

--- -- ---  
You use the BEAGAN BOX much like you use a beige box. Find a house or any telco bridging head, network interface, HUB..ect.. Next unscrew, pop off, or do whatever you have to do to get to the screw terminals inside. Now attach you alligator clips to the proper screw terminals. You should plug a phone into the RJ11 jack now to make sure your connections are right, if you get no dial tone just rearrange the clips and make sure that they do not touch each other or anything other than the screw terminals. Now let out some cable, I recommend that you wrap it around a sprinkler or a tree trunk or something here, so that if you pull the cable the clips don't pull out. Now string the cable out all the way back to your house, (I recommend that you do this late at night so nobody sees you) then get the reel up to the room with the computer in it. Now plug your modem into the BEAGAN BOX and dial away.

## Words of Wisdom

-----  
This is some advise for you when you use the BEAGAN BOX, first, I recommend starting no earlier than 12:30pm, and ending no later than 4:30am. And if all the sudden you start getting shitloads of line noise, DON'T PANIC !! It is probably someone picking up the phone on the line your using, just hang up wait, then pick up the phone and see if you get a dial tone, if so, keep on dialing. The worst thing you can do if someone does pick up the phone, is run down to the side of their house and start pulling off the

alligator clips, nobody that isn't a phreak knows about biege boxing. The people will just think that it's the phone co. And finally, remember that you have to wrap up the cable when your done, so don't run it through too many bushes or anything that it could get tangled up in.
