

Hackit

HackIt! is a resource comparasion and patching utility. It is similar to well-known ResCompare, but creates small .hck files instead of huge (about 45K) applications.

Here is the meaning of the menu items:

Apple:

About HackIt!..

Use your brain and guess yourself!

File:

Compare...

Compares to files and creates the .hck

file

HackIt!..

Takes the .hck file and patches the

victim program

Unpack AutoDoubler...
Depacks applications created by

AutoDoubler Internal Compressor

Quit

Nah, this is what you think.
