Bypassing old versions of onguard using onguard (hehe)
I found this hole out myself, and then later discovered it in one of the
Hackaddicts somewhere- this is on my webpage...

What you are going to do:
You are going to get full admi privs by using an exploit in old versions of
onguard.
What you need:
A computer protected by onguard.

What to do:
Open find file and search for guard, or ard. If you find an applications called
On Guard or OnGuard open it. If not this exploit will not work cause the
admi fixed it. Now open the onguard app that you found and in login type in
admin. Now click on "Startup User" and then click ok , I think. Now you
should have full admi privs- if not it is probably a newer version of
onguard...

How not to get caught:
Make sure no teacher is around. Just log back into studenst mode or guest
mode or whatever the default is when your done doing what you wanted to
do...
