Having fun instlaling stuff on school HD's

Well if you got acces or have acces to install things or run things off your disk at school here are a few things you could do...

Set up a hotline server- or carracho server- and leave it on- of course only if the school leaves there comptuers on 24 hours a day. You could always put an alias of the server in the startup items folder- hehe.

Just run hotline client and download every warez program possible!!!!

Set up and FTP server using Telnet (Hackaddict ezine..) and go home and download every program off the schools HD's!

Run magic key and try to find the pass so you can connect to the grades database or the webserver!!!

You can play pranks, screw around, intsall tons of games and play them during computer class- ther are unlimited possibilities!!!!!
