Just
Plain
Stupid

This place is for just plain dumb and lame stuff.   Silly things that amount to nothing and maybe some dumb worthless apps or something as such.   Kinda fun, but lame.

Lame 1.0

This is a really retardedly lame little extension that during start-up, it asks you if you are really lame, or cool.   If you say cool, then it restarts and if you say you are lame it continues.   So it basically forces the user to say they are lame to be able to do anything.   Unless they are smart enough to startup without extentions or from a boot disk.   I think I wrote this just to give real ware writers a bad name.   You can change it with ResEdit to say what you like.   I put this on my schools computer and the teacher simply would not click on the lame one so he called up the schools tech support.   And he didn't want to either, but he still did.   So for a while, to start it up you had to say you were lame.   Then they thought it was a virus.   So they scanned and nothing came up.   So they reformatted the entire HD.   God they are stupid.   I almost felt sorry for them and told them, but I didn't want to get in trouble.   Lamers.   I should install it again just for another good laff.

If you want Lame 1.0, its in the Files folder.   Have something lame?   Send it to me!
