**What:** Super

**Who:** Bogus

**Which:** Mac Plus

**Category:** Music

**How Much:** \$

Although Super Studio Session has no M.I.D.I capabilities it is still a great program. There are many scores of music out there that you can download and listen to just for fun or to use in your work. Some

great places to find them are on Compu-Serve or

GENie. This is how it works. The program comes with 90 different

sampled sounds or instruments that you can assign to 8 different tracks so you can have 8 instruments

going at the same time with no loss of quality. You just move the notes to their rightful place on the

staff  
and the program changes the instrument

assigned to the correct note. There are also extra

instruments you can get hold of on the boards above  
or you can buy extra music disks for 12 dollars from  
the MacZone mail order service , there are also a few  
floating around on boards , these disks range from  
Heavy Metal to Country to Sound Effects. You can also  
make your own instruments if you own a

Macrecorder or some other audio sampling device by  
using the SoundCap shareware program. You've

probably already heard some Studio Session scores  
that your not aware of. The music from Falcon ,Tetris, Welltris, Shanghai and the  
Carmen

Sandiego series are all works from Studio Session.

Unlike the original Studio Session , Super Studio

Session will work on all Macs. If you don't want to pay 90 dollars for  
the program it is available on most boards.
