• >TDU< SN Cards •

Yet another SN# application that is fast, but very different, and on the lame side. Nothing as organized as HackersHelper or Informant, not even close to the same amount of SNs. And worst of all, it tries to crash your machine when you quit it. However, as with all other SN programs, it's good to have just in case it has an SN# that all of the others don't.

• Claris Organizer 2.0v2 Updater •

This file was yanked from Claris' website for unannounced reason, nothing appears to be wrong with the update (from what I've noticed when using 2.0v2). Just FYI.

• FMP 3.0 Viewer Gold 2.0 •

The Jackal has done it again. Aside from fixing a few minor flaws in the previous [k]'s, the new "Gold" version has a *very* significant speed increase when cracked password proteted FileMakerPro files.

*** Not EVERY file releaseed from last issue is listed here, records got a little screwed up, things will be correct next issue.
