• Claris Emailer 2 Beta x36 •

This new beta fixes a few minor bugs with Emailer (there seems to be nore more crashing when deleting old mail after quitting the application).   However, the oversized font issue still isn't fixed...if it was only a perfect world.   Scheduled release is January 1997.

• GURU 2.2 •

GUide to Ram Upgrades 2.2 contains info on new products.   If you don't have this and frequently install RAM in machines (if you're a MacTech or whatever...), this is a *highly* useful ware to have on your service drive.   If you don't get it, then you're not as eleet as the rest of us.

• RamDoubler 2.0.1 Updater •

The RamDoubler 2.0.1 Updater is required for use in conjunction with SpeedDoubler 2.0.

• SpeedDoubler 2 •

SpeedDoubler 2 now has a control panel for easier configuration with the ware.   You are now able to turn the SpeedDoubler extensions on and off from this control panel, configure your Speed Copy options, and configure Notifications.
