

ounded in August 1996 HackUser has brought high quality software to the Macintosh underground community. The most popular of our applications is our monthly serial number database, which goes out to thousands of people each month. Thank you for your support.

HackUser tests all of the software that we release and make sure it is 100% to be virus free and without errors. Because quality counts, make sure it has the HackUser logo.

Our software can be found all over the world.
