SLF DXR Kracker v0.0.4a1
The Macromedia Director .DXR Kracker

Website: Unknown
Price: Dont Ask

Wow that cd i just got in the mail was really cool.   It had a sweet presentation that said "Made With Macromedia" at the end.   I wish I could make stuff like that.

Well you can.   Or you can just steal it.

More than likely it was made with Macromedia Director because it is the leading tool to make presentation software for pc's and macs.

This application allows you to take a protected director file and hack it so you can edit it in Macromedia Director.   This is great for a hacker, because we can learn all the tricks that the big media companies use to make great director presentations and learn how to do them ourselfs.

Well, this application is easy enough to use.   Copy the file you want to hack to your hard drive.   Most of the time companies like to put them in hidden folders on CD's like MacAddict like to do.   Then make a folder and put the SLF DXR Kracker in the same folder as the DXR you want to krack.   Launch the kracker and pick the file in the screen below.

◊

This is PowerPC-only right now and the kracked file gets saved into the same folder as this app, so move it or rename it before you do a second one.

The SLF DXR Kracker will create a new copy that you can edit in Macromedia Director 6 with no problems.   Pretty nice eh?   This should work on most pr0n cds as well.

This was included in the read me:

SLF = "Semiconcious Liberation Front"

This product is Lysergicware.   If you krak other people's multimedia CD's and steal their graphics for use in your own projects, you agree to buy LSD for at least 3 members of the SLF.

If you are pirating content from any of the following companies, you must buy 2 doubles for each member of the SLF that catches you using the software:

Disney
Pixar
CNN
Microsoft
Amblin Entertainment

Happy infringing!

◊

GOOD NEWS: Great for cracking DXR files, Easy to use, Just click and crack
BAD NEWS: Crashes with some DXR files, Very crappy start up screen
