The **WinOnLine Review™** (WOLR) is an electronic magazine distributed worldwide to major online services and is available on the Internet (see below). It is estimated that each issue is read by well over 100,000 online and network users. This magazine is published by **Windows OnLine™**, an online (modem) service dedicated to supporting Windows end-users and professionals. **WOL** prides itself on having the most complete and up-to-date library of Windows files, with over 30,000 Windows oriented files available, and over 3,700 OS/2 and 44,000 DOS as well. WOL operates multiple nodes equipped with *US Robotics 28.8 dual standard v.everything modems*. We hope you will give us the opportunity to become *your* BBS of choice. We welcome your letters and comments about our magazine.

Please visit our *World Wide Web Home Page* at <http://www.cris.com/WOL> You'll find access to downloading current and back issues of the **WinOnLine Review™** and its predecessor publications, as well as historical data and more information about **Windows OnLine™**.

# HOW TO NAVIGATE WINONLINE™ PUBLICATIONS

The Windows Help system is used by our magazines. It's a convenient way to view Hypertext files like the WinOnLine magazine you are reading now. Here are a few tips to make your reading more pleasurable and convenient:

The Help Button Bar at the top is arranged to help you move easily through the magazine:

The **Contents** button, when clicked, will return you to our Table of Contents

**Search** starts a dialog box with all the keywords that can refer to different sections and articles in the magazine. Try it and see.

**History** displays a listing of the places in the magazine you have been so you can return

**Print Topic** will send the article you are currently reading to the printer. It will not print "popup" boxes, though.

**<<Page | Page>>** can perhaps be the best way to view WinOnLine Publications. With these buttons you can browse through the magazine in page order, just as you would a paper magazine.

You may use the keyboard Page Up, Page Down and Up and Down Arrow keys to forward and backward in an article, or use mouse clicks on the vertical bar shown on the right.

The automatic **Pop-Ups** throughout the issue can be cleared from view by a simple mouse click anywhere on the screen. You will find that some may have a special bit of text that, when clicked, will take you even further to another page, function or popup. Using the **Back** button will always return you to where you have been.

Certain bits of text may be a different color be underlined, usually indicating that clicking on them will cause something to happen. Certain graphics, such as the authors' at the close of each article, are keyed to a popup image such as information about the author. When you see your arrow cursor change to a hand, you are on such a spot. [Click on this text](#) (see the special color and how your cursor changes?) to see what happens.

We hope you will enjoy the WinOnLine publication. If you want to print this page as a reference, click on **Print Topic** on the button bar.

Now click **Back** on the button bar to resume reading where you left off.

**SURPRISE!!!**

**This is a popup box.  
Click anywhere and  
it will disappear.**

# PUBLISHER'S DESK

## READER SURVEY

The replies we received from last month's reader survey made us want to repeat it, so we could get more responses. Your opinion is important to us!

We hope you will take the time to help us continue to develop and grow by answering the following quick series of questions asking for a few facts and opinions. We have tried to make it easy to reply; see the options at the end of the page.

The results are entirely confidential and for our own internal use and guidance only. There's one thing that WOLR will *never* become: complacent.

Using a scale of one to ten, ten the highest, rate:

Importance	How are	
<u>to you</u>	<u>we doing?</u>	Comments:

## LETTERS

---

We've gotten some great responses as a result of our Reader Survey — have you sent it your opinion yet? Please e-mail, fax, or snailmail your reply to the survey repeated from last month in the Publisher's Column. Here's this month's letters:

Dear Wolly:

I sure enjoy your online reviews. I found my first review on a BBS I use here in Seattle locally. And I was hooked. You're one of the reasons I got my brother using America Online so I could get your latest review.

I was wondering, though, is it me or aol, but I can't away find the feature files like autocrct.zip and wguid16.zip, yet your review said I could get them online. I looked in the new listing and they say that they have them, but, I have trouble trying to find them and others. It sure would be nice if aol would make a special place for featured files. Maybe you could put a good word in. Or if you could give me some hints on how to locate them I would be most grateful.

Your fan, Marlene  
Seattle, WA  
(via the Internet)

The answer is: it's AOL, and actually, a common problem across the spectrum of all online services. An author may issue his latest creation as MYPROG12.ZIP, but AOL, CIS, ZiffNet, or even someone who has downloaded the program and rezzipped it may change the name to their own specifications. The file name that Wolly and WOLR provides is the one that is posted on Windows OnLine. Your mileage may vary.

I suppose AOL and others may have their own search methods; a Sysop there can probably help you. When callers are on a BBS using PCBoard software, like Windows OnLine, finding a file is very easy. The command in parens below triggers the response:

(L)ocate searches by filename, so if Wolly were to then respond to the PCBoard request for a filename, he could use wildcards to try and find the latest version of MYPROG12.ZIP, so he might input MYPROG\*.\*

(Z)ippyScan looks at all the words in the description text, so if MYPROG12.ZIP was called MyProgram, Wolly would respond with those words as the keywords to search on. To save time, in both cases Wolly would specify a range of directories to restrict the search to likely places only. There's a list of file directories in every WOLR.

Wolly touched on another good reason to search by program name rather than the precise filename published. There may have been another release of the program since the review and publication, and you'd be better off grabbing the newest version.

There are jillions of online systems, but few with as large and well organized a file selection such as on Windows OnLine (commercial alert!). That's another way to save time — just join WOL and you'll find the file right here, under the filename published.

And THANKS for being a fan!

<W>

To the Editor:

As usual, I enjoyed the latest Review. I especially liked the way you wrote up the Serif Page Plus DTP program. I got it a few months ago with the \$69 offer and I am astounded at the value for the money. And the ease of use and the . . . - well, I don't have to tell you. I also really liked the plea to shareware authors to clean up their act. Last week I installed one attractive sounding program which snapped me to the DOS c: prompt so fast it hurt my eyes. The very next shareware download that I installed and tried was missing a .vbx file! Sloppy, sloppy. OTOH, some of the very best stuff on my hard drive is shareware and freeware.

Two suggestions: I imagine most of your readers are advanced Windows users and this category is now pretty deep into the Windows 95 thing. Which means, concretely, that many of us are now thinking 32-bit when we are evaluating programs. The issue of '32-bitness' is coming to the forefront. Yet it is not easy to track down what will work or not work. Certainly programs written for NT don't necessarily translate to 95 at all. Perhaps more articles in this direction.

Anyway, keep up the great work - for you and the staff!

Monica  
(via CIS)

Some of our reader survey responses have lead us to believe that many of our readers are also thinking 32-bit Windows. We will definitely ramp up our coverage of Win95 issues and software as market penetration warrants it.

Thanks, Monica, the staff writers appreciate your kind comments and appreciation of our work!

BG

# COMMENTS FROM CACHE LA BYTE

an opinion of Thom Foulks

---

They'll be no welcome to warnware from me.

It's time to officially designate a subcategory of shareware. For want of a better term, we'll call it Warnware. You've seen it -- it's the shareware package that displays a profound paranoia (a mental disorder marked by irrational suspicion) over registration. Registration, of course, means payment to the programmer for use of the product.

Warnware tells you that the product won't let you use it after "x" number of days, or it flashes intimidating notices on the screen that you've not registered, or it won't let you print or save a file, or you can't add to its data, or..., or..., and so forth. All of which falls under the already-established subcategory of shareware known as "crippleware." Crippleware is download products whose functions have been so limited that your tasting of the wine of their quality is a sniff of a stale wineglass.

But Warnware adds insult to injury -- it is so distrustful of your intent in looking at the product, that it threatens you at every opportunity about what may happen to you if you continue to use the product without registering it. Warnware stuff flashes messages on your screen, fouls up your video attributes, stores hidden files on your system (for its own date/time reference), and -- in one extreme case I've seen -- even sets about removing itself, if used beyond the trial period.

Few Warnware products have any diplomacy or savoir-faire. Their messages are ill-timed, intentionally aggravating, and a blockage to your effort to honestly evaluate the programmer's efforts. The very existence of such tactics from a programmer means there will never be a registration from me, and I just might continue to use the product for whatever significant obscure function it can perform that I can't do otherwise. That's MY counter-attack on Warnware, and you're welcome to adopt the technique.

One has to wonder if it might be a better product if the programming time involved with the warnings were instead devoted to honestly improving the product, especially beta-testing and obtaining user feedback.

Let's try to put this all into perspective. Did you ask a programmer to write the shareware product you're looking at? No. Did you say you would pay him/her for their efforts if you liked the product. No. Do you need any more hostility in your life? No.

I wrote shareware in the CP/M days, and had many downloads from CompuServe, and quite a few checks in the mail. I know that many who didn't send me checks, used my software. I was a realist. The products I wrote were, first of all, to accomplish a goal on my own system. I chose to share them with others because I figured that others were trying to cope with the same problems I'd overcome, and I could show them how to do it. I was gratified by the response from people who appreciated my product and assistance; many of whom paid me for my efforts.

I didn't get rich. But, I really did get reimbursed, from checks (of course) and from the

contacts I made with people asking/advising about my products. That's what shareware is all about.

Warnware, on the other hand, is simply an insult. I'll not register a product that insults me onscreen. Period. And I'll certainly not send the author a check for the gratuitous insults to my integrity.

**Thom Foulks**

# WINDOWS 95 Q&A

written by Steven Jay Cohen

Windows 95 may be the most anxiously anticipated product in the history of personal computing. As we go to press, Microsoft is continuing to ship some 400,000 copies of the official Windows 95 pre-release beta to users around the world. Yet, many more have yet to personally experience the new environment, and we all share similar questions in our minds about the new operating system.

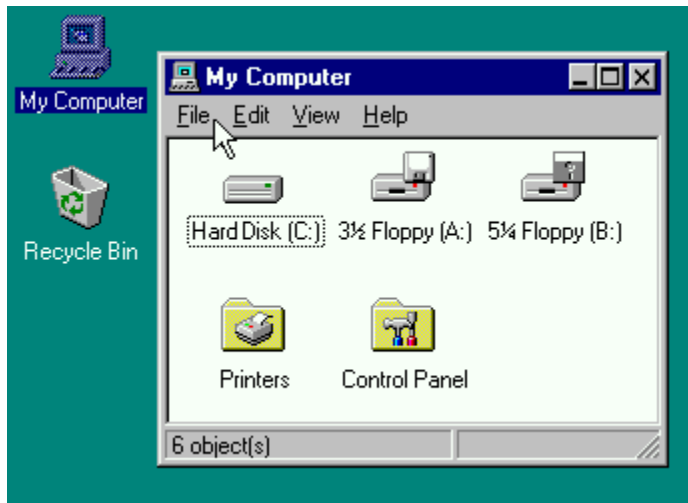

Along with the anticipation comes anxiety — we all have the same question: what will this Windows 95 do for or *to* me? Debates and questionable information travels the nets as biased individuals and publications share their opinions. It's hard to know who to believe.

Technical Editor Steven Jay Cohen has been in the beta testing group since the beginning. While we know that he likes Windows 95, despite the bruises it has given him during the past months, we've asked him to field some basic questions and give us some honest, non-technical opinions about the new operating system.

Do you have a Windows 95 question or opinion? Send your questions to: [steven.cohen@wol.com](mailto:steven.cohen@wol.com) or [bob.gollihur@wol.com](mailto:bob.gollihur@wol.com). Selected questions and comments will be published in our *Letters* column or may be compiled into a future Q&A article.

<BG>

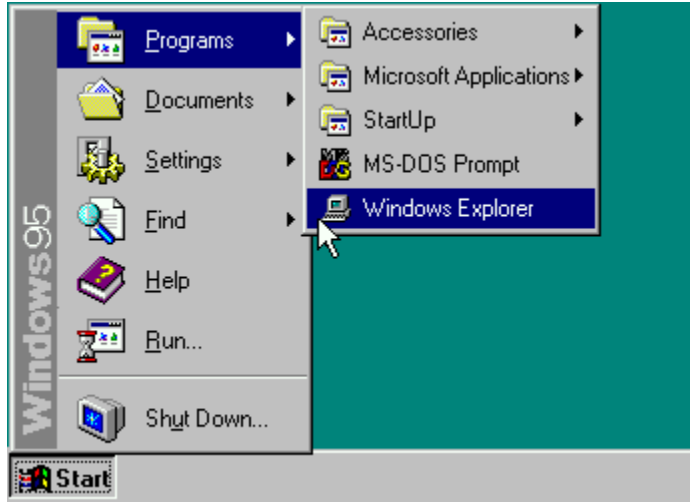

*I hear that the new interface turns your PC into a Macintosh. Is that true? How does it look and feel the first time?*

**A:** The Windows 95 interface incorporates several desirable features that have equivalents on the Mac, but the look and feel is still quite different. The seamlessness of the desktop, with its drag 'n drop functionality is certainly a major similarity. A new feature that Windows 3.x may find attractive is the ability to create **shortcuts** to your frequently used applications, in the form of icons that can easily be placed on your desktop for quick access and launch. In fact, installation automatically places several important icons on your desktop. The "My PC" icon will open up to give you an overall view of your file/hard drive organization, and the Recycle Bin (similar to the Macintosh "Trash Can") provides an easy way to delete unwanted files.

Depending upon individual configuration choices, you may also find Network, Briefcase, Inbox,

and Microsoft Exchange icons as well.

Three other major parts of the new "look and feel" are the **Start Button**, the **Taskbar**, and context-sensitive **right mouse button functionality**. The Start button takes the place of 3.x's Program Manager as your operations center. Click here and it cascades a hierarchical menu of your groups and their applications. It has the same sort of feel of 3.x add-ons such as Squeegee or BackMenu, and requires only a single click to select the target. The process, though different from Win 3.x, is quite speedy with a little practice. Each open application and minimized window is represented by a button on a movable Taskbar, helping to keep track and navigate among the programs that are running. A single button click immediately brings an application to the top of the heap, providing a quick alternative to the familiar Alt-Tab function (which is still present, if you'd prefer to use it.) Finally, Microsoft has built in a consistent function for the long-neglected right mouse button. No matter where you are on the desktop, a right mouse button click gives you a popup menu with choices appropriate to the application under your cursor.

### ***I've heard some horror stories about installation. Should I install it right over top of my existing 3.11 files?***

First of all, a little common computer sense should prevail here. As with any major system installation you should do a complete backup of all the data on your system. That way if anything goes wrong, you'll be able to restore your system and all you will have lost is a little time. Now that you have your backup stored in a safe place and you've thoroughly read through the README.TXT on the Windows 95 CD or Setup diskette, you have a couple of choices depending on your individual needs.

By the way, you should set aside a block of time when you perform your installation. The actual process takes anywhere from 30 to 60 minutes, and sometimes a little longer, depending on your system. And about your system -- Microsoft states the minimum hardware requirements to be a 386DX with 4MB of RAM, but recommends a 486/33 with 8MB of RAM. You'll do far better using the latter specification as a guide for the minimum.

If you have the hard drive space, and you'd rather give it a test drive before you make your decision, you have the option of installing to a directory other than overwriting your current

Windows system. If that is your choice, then the installation process will allow you to boot to either your original DOS/Windows 3.x system or into Windows 95. You will need about 40MB of available hard drive to install to a clean directory, and Setup will check your system to make sure there is enough space. It's a good idea to run a disk utility first, to make sure your hard drive file structure is in tip-top shape, too.

A down side to installing to a clean directory is that none of your Win 3.x applications will be automatically imported into Windows 95. In order to run your apps in Win 95 you must re-install each of them. Because programs are registered differently with this new operating system, you will be unable to simply create an icon and run as you have in Win 3.x.

On the other hand, if you are sure that you're ready to take the plunge, the easiest and quickest way to be up and running is to go ahead and choose to upgrade, installing Windows 95 into your current Windows directory. All of your presently installed groups and applications will automatically be imported into the new system.

***This new plug and play stuff has me worried. What if it can't or won't recognize an old type drive I have, or what if my video card isn't supported?***

Actually, this is a reasonable concern. I think it's fair to say that the main cause of Windows 95 delays has been the gargantuan effort being put into hardware and backward compatibility. When you think about it, it's probably almost impossible to insure compatibility with *all* existing hardware and software. It's a good bet that some Windows 95 users are going to run into some installation and compatibility snags. Having said that, I think it's equally fair to say that ***most*** users will be able to upgrade without a hitch. All the signs say that if you run into trouble, help will be readily available. Microsoft is gearing up for a huge support effort in conjunction with the formal beta release — you can be sure they want you to succeed almost as much as you do. They seriously want to win the operating system war.

***Is this new release even harder to handle and understand than 3.11? There are so many INI file options in 3.11 to learn about and that can go wrong, I don't know if I can take it!***

As with any new experience, there is a bit of a learning curve. Thankfully, in this case, you'll probably find this one to be short and sweet. Despite the new chiseled looks and some different approaches, this is, after all, *still* Windows. Windows 95 still bears the same intuitive feel and consistency that made Windows 3.x so popular. It won't take long to come right back up to speed.

As for the INI file options so often dealt with in Windows 3.x, they are all but a thing of the past in Windows 95. A major improvement in this version incorporates system and application information that used to be found in SYSTEM.INI and WIN.INI into the Win 95 *registry*. This information is intentionally buried deep within the system, out of the reach of the average user, and functions invisibly, for the most part. For reasons of backward compatibility, however, some INI files *will* still exist, but they contain very little critical information. Many users will probably want to get the final release's Windows 95 Resource Kit in order to have valuable technical information available.

***Okay, I know the underpinnings of Windows95 is supposed to be better than the Windows 3.1 I'm running now, but exactly how, and what does it get me?***

This, ladies and gentlemen, is the payoff. You are going to be very pleased with the noticeable stability and the increased multi-tasking and networking capabilities. Despite the rumblings about bugs having to do with multi-tasking 32 bit applications, you can relax. Presently, there are few 32 bit applications available for Windows, though there are many waiting in the wings as software manufacturers ready for the formal release. In my experience, Windows 95 multi-tasks your current 16 bit applications like Windows 3.x only dreamed! It brings an overall greater stability to all your work. Of course, it's not the powerhouse that Windows NT is, but then it's not designed to be. While there are no guarantees, I think we can be fairly certain that by the time Windows 95 is formally released, the 32 bit bug I refer to will be fully addressed and excised.

***Does that mean I have to go out and buy all new software and shareware to get the benefit of this new operating system?***

Absolutely not! Important utilities to optimize and clean up your hard drive(s) are built right into the system. As I mentioned above, Windows 95 runs 16 bit apps solidly -- *much* better than in Win 3.x. Of course, there will be a few of your favorite applications and shareware that won't be able to make the trip without some changes by the author/manufacturer. If such software's purpose remains valid in the new environment and is worth its salt, you'll undoubtedly be seeing an upgrade in the near future. But be assured -- most of your current Windows 3.x software will feel right at home in the new environment.

***Can I still run my old DOS programs in Win95?***

The answer to this is a qualified, "Yes!" The exceptions have to do mostly with some utilities specifically written for the 16 bit environment. Because long file names can trip them up, some files might be misidentified as corrupt, causing invalid results. On the other hand, most other DOS applications -- games, spreadsheets, word processors, you name it, will run like a top.

***What about the long file names that it's supposed to have? How can it handle a mix of them? For instance, what if I create one in the 32 bit version of Word, and then try and access it using a older editor I have that can read Word files. What will happen to the filename?***

In the Windows 95 environment, you may indeed create long file names. I'm sure this will be one of the most welcome changes. Applications unable to recognize these names will still see the file, but with a unique, truncated old format, 8.3 name. If you only view the file with your old editor, the long name will still be retained for those applications that are capable. If, however, you save the file with your 16 bit app, the name will be shortened. In turn, the long name may be restored by saving the file with a capable 32 bit application.

I expect that we will see a flood of new shareware releases to fill in the gaps, just as is done with every operating system and application. Windows OnLine will continue to bring you reviews of the latest Windows 95 utilities to enhance your experience and success.

*I don't really know if it's worth the trouble to upgrade, and we all know how new releases are. Should I just lie back and watch, and then wait for Windows 95.1 to come out, after the bugs are fixed?*

Ultimately, this is a very personal issue. Individual viewpoints, needs and considerations must necessarily come to bear in making such a decision. I can only give you my own opinion -- what's right for me, for whatever that's worth. I have been working with Windows 95 for about a year now. I've worked with it intimately, watching it change and grow, and marveled at the tremendous strides taken during its development. That's not to say I didn't have any problems along the way. That was fully expected, however. I do a lot of beta testing and am fully aware of the risks one takes when beta testing *any* new software. Problems and the working out of them is necessarily part of the process. How else could the bugs be ironed out?

I've come to choose Windows 95 as my personally preferred operating environment. I do a great deal of work in Windows 3.1, Windows NT, *and* in Windows 95. My personal recommendation is as follows: If you enjoy Windows 3.x and find it productive and satisfying, but you're looking for improvements in stability, capability, and speed, then this is definitely the way to go. Granted, there are changes that take some "getting used to," but it's definitely worth the effort. Windows 95 is the greatly improved, next logical step to take. I reiterate: Take the proper precautions: Do a complete backup before you begin. Then you can participate in this great adventure with confidence. I feel certain you're going to like it here.

## Shareware Briefs

Quick Takes and Pure Opinion from Wolly

### MOIRE CIRCLES SCREEN SAVER

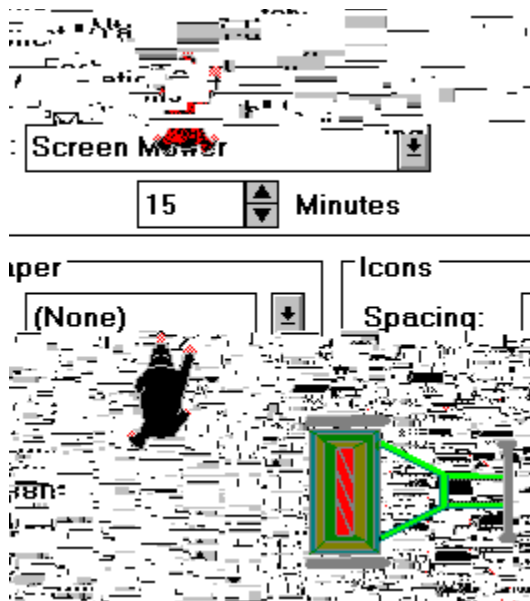

You'll be screaming for moire, moire!

This **subtly beautiful screen saver** presents patterns of colors that **will certainly stretch your imagination and display**. Unless you can handle **256 colors**, you need not apply; Wolly's sorry but this 16 color graphic is the best he can do. Author Stephen B. Kirby uses the moire definition and describes it best: *"an independent usually shimmering pattern seen when two geometrically regular patterns (as two sets of parallel lines or two halftone screens) are superimposed at an acute angle to each other."* In other words, the moire pattern created by this screen saver is generated by an interference pattern between the multicolored concentric circles and the pixel grid of the screen. Wolly says, whatever, but "Wow!" Using the built-in Windows mechanisms and passwords, **MOIRESCR.ZIP** (90K) is fortunately **freeware**.

### SCREEN MOWER

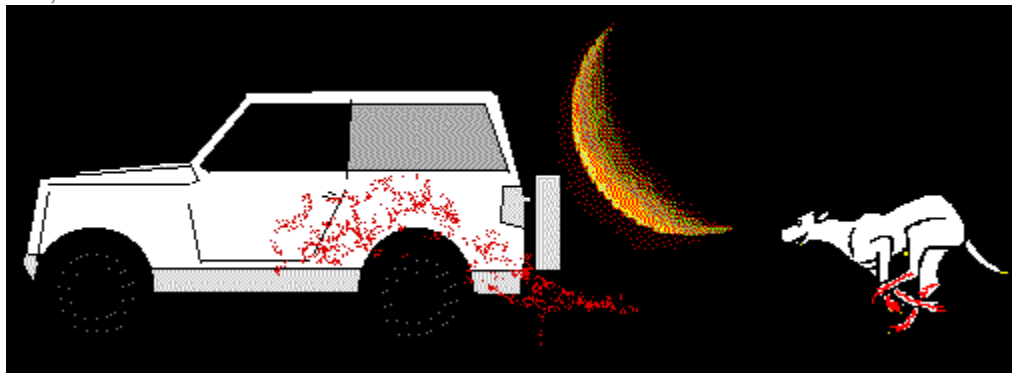

YES! Wolly's screams are answered: mower, mower!

Wolly couldn't have asked for a better segueway. This **cool screen saver** from Tallis Software and David Griffiths **mows across your screen, cutting the display into tiny unrecognizable features**. The real fun part is **watching the creature (a 'possum, perhaps?) hurriedly crawl up the display, trying to avoid the wild mower**. Well, **sometimes the mower catches him, and, aah, Wolly will leave the bloody results to your imagination**. **MOWER.ZIP** (27K) is more **freeware** fun.

## OH! J

Oh, no!

**It had to happen**. Wolly is only surprised that it took this long. This screen saver brings **animation and sound** to recreate a series of events that involve a Bronco, some screams, an airplane, and a freeway chase. Of course, as stated during the program, **any resemblance to real people or events is strictly coincidental**. Yeah, right. In any case, the "I can't help but look at a traffic accident bad taste award" goes to the folks who bring you **OH\_J.ZIP** (710K) for **\$15.00**. Sorry, Wolly couldn't look away, either. BTW, you'll need 256 colors to appreciate this atrocity.

## SKI BEAR

Caffeine-free PC? nah.

Will this parade of **freeware** screen savers never end?!? The Coca Cola company gets into the act by providing this entry that **takes those famous polar bears from its series of TV commercials and puts them on skis**. Choose the **number of bears, their speed and animation, and options for snowflakes**. Now, Wolly has to suggest that this is a **pale imitation of the computer animated creations on TV**, but, what the heck! **SKIBEA.ZIP** (64K) is yours only for the cost of a download and having their logo imprinted into your mind. Again, a 256 color display is indicated, and the example shown here in 16 colors probably tells you that.

## TRUE TYPE FONTS

Wolly slips in a useful FON

**Pagheti Regular, Condensed & Expanded**  
**Sling & Openface**  
**Star, Openface, & Typewriter**  
**Willshire Classic, Gravure, &**  
**WILSHIRE SQUIRE, EXTENDED, & ULTRA**

(Star TrueType Fonts for Windows, 23 fonts)

**STARTT.ZIP** (1280K)

ER Architect MAC **ARMAC.ZIP** (34K)  
(English-Russian characters)

*AT\_Caslon Engraved* **ATCASE.ZIP** (66K)

*Child's Play* **CHILD\_TR.ZIP** (20K)

### MSIFONT.ZIP (10K)

A **freeware** FON (screen font) file from Mustang Software, Inc., ideal for datacomm and offline reader applications.

As always, review the documentation accompanying any file and abide by shareware registration requests if you decide to adopt it.

## THINGS TO DO TODAY

Nothing, I hope

**TODO things to do today**

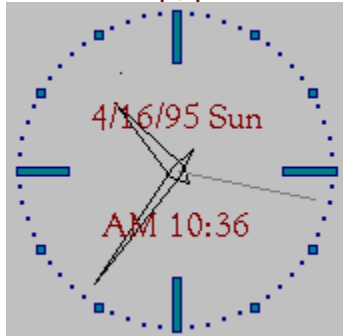

Date Sunday, April 6, 1995 Done

Write the Shareware Briefs	<input type="checkbox"/>
<del>Feed the cat</del>	<input checked="" type="checkbox"/>
Call and bug Steven Cohen	<input type="checkbox"/>
Things To Do Today	<input type="checkbox"/>
Eat the cat	<input type="checkbox"/>
<del>Call and harrass Ed Hoffman</del>	<input checked="" type="checkbox"/>
<del>Visit the WOL World Wide Web site</del>	<input checked="" type="checkbox"/>
Things To Do Today	<input type="checkbox"/>

PaperLess Software brings a **paperless way to keep track of your chores**. List up to fifteen items, and check them off as they are done. Drag and drop a job and move it up and down on the list as priorities change. **TTDT24.ZIP** (32K) is attractive, easy on resources, and a mere **\$5.00**.

## OLD FASHIONED CLOCK

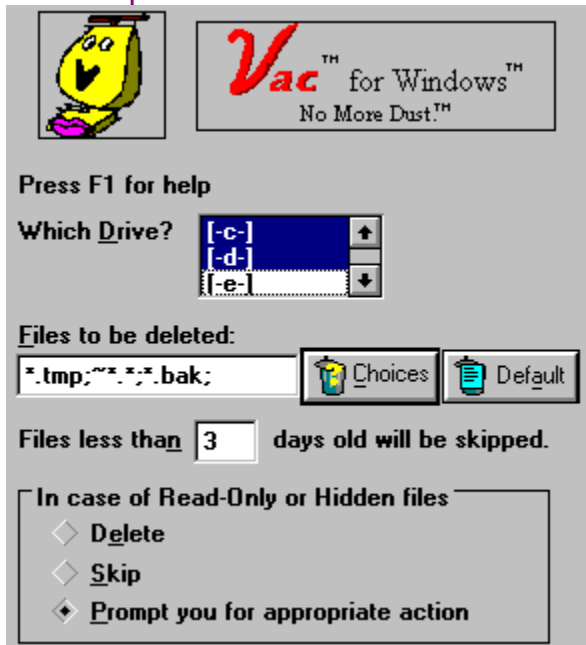

Wind me up, please!

Freesoft brings you a **twist on the overdone computer clock** — one that needs a bit of attention. **This clock needs to be wound once a day**, lest it stop or behave erratically, just like your old pre-quartz Timex. It can be slightly off, too, so **you may have to reset it**, and the face gets dirty and needs wiping every so often. Old Fashioned Clock isn't an antique — **it has a timer and ten separate alarms** that will play a WAV file of your selection. **KENCLK20.ZIP** (35K) is **freeware**, and the display is resizable.

## VAC

Suck it up!

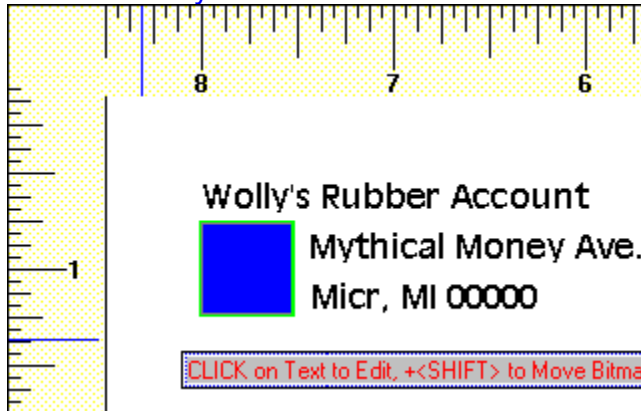

Well, **rid yourself of those dusty old temporary ~, BAK, and TMP files** with VAC for Windows. Choose from the three default extensions, and add your own. VAC thoughtfully allows you to **keep those dated within a specified period of time**, and can **automatically skip read-only and hidden files**. **VAC101.ZIP** (270K) will suck up files **across multiple drives**, and is a

mere \$5.00.

## CHECK DESIGNER

Fees for funky finances

Wolly tried this **DTP program for creating your own checks**, but didn't find it too easy to operate, nor were his results satisfactory. **Clumsy would be a compliment.** As the documentation weakly points out, the funny little numbers at the bottom of checks are printed in **special magnetic ink**; it also mentions sources for LaserJet cartridges with the appropriate toner. Wolly's banking operations consultant, who has had his share of fun with MICR sorters, mentions that those critters are mighty fussy and are not particularly fans of crummy checks with mucky MICR. In fact, he has taken great pleasure (bankers are like that) in charging customers a special per-item fee if they get checks from third parties that do not meet specifications; he says the 3-5% reject rate they get makes the banking industry very grumpy. So, he suggests that if you don't like the cute bunny checks that he offers, you **find a reputable check printer rather than doing it yourself.** So, in his and Wolly's opinion, **CHKDES15.ZIP** (95K) is a "no sale" at **\$40.00.**

## ELECTRONIC POSTAL WINDOW

That'll be 32 cents, please

Want to know **how many of those little pieces of paper to lick** and apply? Click on the appropriate icons to **choose the method, medium, and destination**, then enter the weight. Then, whether rain, sleet, or snow, unless there's a power failure, Electronic Postal Window **delivers the postage due**. **EPW15.ZIP** (504K) **pretty, works well, has some nice features**, and is **\$29.95**, more if you want a disk. Wolly notes that last year, when he asked, the local PO gave him a free pamphlet with the same information. Hmm. Your choice.

# JASC MEDIA CENTER

a review by Charles T. Miles

---

I am constantly searching for a better cataloger to handle the thousands of clip-art files I maintain. All too often, I've known that picture is around here somewhere but I just can't remember where I saw it last. What diskette or CD was it on? Am I going to have to waste hours to what should be a ten minute job, all because I can't find one little piece of clip-art? No! ...now that I have **JASC Media Center**.

The first pleasant surprise came when I opened the packet and an extremely small and well-illustrated instruction manual slipped out and onto my desk. I quickly flipped through it, just a quick scan, to get an idea of how much instruction was really in there. To my great pleasure each and every page held detailed pictures of the menus I would be using, with comprehensive instruction for each and every operation.

---

My initial project was an attempt to create an album of the clip-art I keep on my hard drive at all times. This is a collection of 674 assorted clip-art files, vector and raster, that I find myself using frequently. Frankly, I wasn't expecting much; many times before I had tried similar programs only to wait a very long time while the program converted my large images into tiny, barely recognizable thumbnail-sized pictures. Until coming across **JASC Media Center** all of the thumbnail album creators I've tried were extremely slow or required separate albums for each different format. Not with this program. I didn't even have a chance to leave the keyboard. I was fascinated first by the quality and clarity of the tiny images that were popping up on my screen. Then I noticed how fast each was being generated. In only twenty minutes time I had an album of all of my 674 clip-art images. Even those in the sub-directories were scanned and included in the album catalog.

Now I can page through 30 images at a time or double click on any image and bring it to a single full screen picture. This small but powerful program permits the selection of any number of catalogued images to move, copy, delete, or convert. The slideshow feature sequentially displays individual full screen images and provides several options. Set them to be on the screen for 1 to 600 seconds and change automatically, or go to the next image with a press of the space bar. With the press of a mouse button it can even play a music CD while watching the show. This is a very handy feature for those who might use this for a slide presentation in their office or store.

In addition to its fantastic ability to page through hundreds of images in a few minutes, **JASC Media Center** allows you to conduct focused searches for the pictures you want. To each thumbnail image you can add comments and/or keywords that provide data for keyword or comment string matches. For instance, amid my 674 files I put the word, "bear" in four of the comment sentences. The same was done in the keyword area. Using the hot-keys to call up the search feature, I typed in the word, "bear" and selected "Find Next." I was instantly brought to the first image I had labeled, "bear." In turn, each press of the F3 key displayed successive images containing the word, "bear" in its comment. This is an extremely powerful organizational

tool for huge image libraries.

**JASC Media Center** even printed a catalog of my images that I could three-hole punch and put in a folder. Unlike most catalog creators that fail miserably in this area, **Media Center** once again came shining through with good quality thumbnails of my clip-art, 30 per page, and very recognizable.

These features alone are enough to make me happy (so what if I'm easily impressed), but there is even more! Not only does **JASC Media Center** handle over 25 different formats of raster based images, it also handles nine of the most popular vector based images. It manages sound, movie, and animation files just as well. Imagine being able to page through hundreds of WAV or MIDI files in a few minutes, double clicking on the thumbnail and hearing the file. Picture yourself going through a thumbnail catalog of your AVI, FLC, or FLI files, the first frame visible as a tiny image, then playing each one desired with just a quick double click of the mouse.

In my opinion, **JASC Media Center** could have been split into and sold as three separate programs: one for clip-art, another for sound files, and yet another for movie and animation files. **JASC** generously choose to give you all three in one fantastic little package!

I called tech support only one time, (phone answered on the first ring), and after twenty minutes on line, with intensive and extensive help from their support team, we realized the problem was in my machine and not their program. They gave me a simple procedure to work around the problem and I was on the road again.

Whether your love is clip-art, sound, or animation, you will find a helpful friend in **JASC Media Center** for keeping track of those many and sometimes large file collections. I recommend you give this one a serious look.

# INFOSELECT EXPRESS

a review by Steven Justice

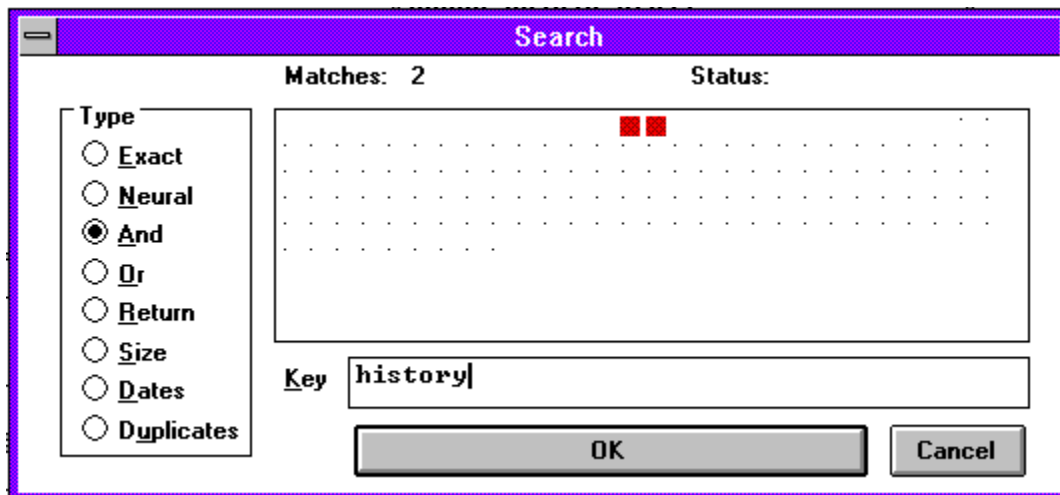

Every now and then computer writers complain about how often Windows software borrows its “metaphors” from archaic pen-and-paper technology: why, they ask, should a PIM look like a paper organizer pasted onto the computer screen? I think that these writers are missing the point: these metaphors are useful because they tell the users whether the software will fit the way they work. I know that Lotus Organizer will never work for me because I’m not the sort of person who writes important information in a day-planner notebook. I am the sort of person who writes important information on whatever piece of paper is nearest me, so that my desktop (I mean the top of my desk, not the Windows user interface) is cluttered with old envelopes, matchbooks, and half-sheets of paper covered with phone numbers, page references, reminders, recipes, and airline reservation numbers.

If you have ever searched for the envelope you wrote a phone number on, you just might decide that **InfoSelect Express** is the best software bargain around. Though it is commercial software, its retail price of \$19.95 makes it cheaper than most quality shareware. If it is true that “The fox has many tricks, the hedgehog only one—one big one,” then **InfoSelect Express** is a hedgehog of a program. It has one big trick: it stores as much random information as you want and retrieves any part of it as quickly as you can think of what you want.

From the packaging inward, it is an eccentric little program. It comes in a box the size of a thin paperback book: one disk, one registration card, period. There is no printed documentation (instructions are contained in the Help file). It uses only monospaced fonts (like Courier). It doesn’t use the Windows “common dialogs” (its equivalent to File|Open is one of the weirdest dialog boxes you’ll ever see), and its on-screen appearance is minimalist verging on stark:

On the other hand, it takes less than five minutes to learn everything you need to use the program, and after you have used it for a few days you discover that its eccentricities are all there for good purpose. You store each bit of information, in a form as unstructured as you want, in a separate little window. You hit the letter *N* to create a new window, or *D* to open a window with the current date stamped on it, and type what you want into it. As soon as you're done, the program automatically reduces the size of the window to the smallest size in which it can display everything. You can resize the window yourself; if you make it smaller than the text it contains, it will add a scrollbar. As you add new windows, it fits as many on the screen as it can without overlapping. You can "page" through the windows with the down- and up-arrow keys, or page through screenfuls of windows with the page-down and page-up keys. And that is it.

That is it, at least, until you need to find something again. Hit F2 and the search dialog comes up. It is hardly elegant, but it does the job very efficiently. **InfoSelect** supports “*exact*” searches (the most familiar search type, the one you use when you have your word-processor look for a string) and *boolean* searches (AND/OR/NOT searches; NOT searches are rather confusingly called “return” searches in **InfoSelect**). It will search for notes of a particular *size* (measured in number of characters), notes bearing a particular *date* stamp, and *duplicate* notes. And it will perform *neural* searches, the simplest form of “fuzzy” search; neural searches allow you to type in a list of several words, and then find the records that most closely match the list. (In any of these searches it supports the single wildcard character “?” to represent any letter.) As you type each letter into the dialog box, it immediately registers the number of matching records in the form of little black squares above the text box. It won’t let you complete a word if there are no hits at all; if I had tried to type “hix...” when I searched for “history” it simply would not have recorded the “x.” As soon as you are satisfied with the form of your search, you hit ENTER and the matching records are displayed *immediately*. That, indeed, is the most impressive thing about this software. Just to try it out for this review I loaded mine up with about 2400 records (**InfoSelect** will import ASCII files or data files; in the latter case, it assigns each record to a new window). The searches were still absolutely instantaneous: before I could remove my pinkie from the ENTER key the “hits” were all displayed on the screen.

**InfoSelect Express** also offers “forms”: templates for such items as phone messages, fax cover sheets, to-do lists, and the like. These use square brackets to mark off particular fields, and you can TAB from one field to the next. (When you print items created with a form the brackets don’t print unless you want them to.) Creating your own forms is as simple a matter as typing in text and brackets. You can activate a “tickler” that will automatically call up items marked for a particular date (e.g., “4/15/95”) when you start the program on that date. And the program offers a auto-dialer that will dial any phone number, via modem, that is included in a note. You don’t have to mark the phone number, since the software is intelligent enough to recognize a phone number when it sees one.

There are a few glitches in the program. When you click the cursor on a note window to edit the text, the window will often change size and place, so that you have to chase it across the screen and set the cursor again. Its use of accelerator keys is both eccentric and inconsistent, so if

you are touch-typist, it may take a few days to get used to odd things happening as the result of conventional keystrokes. And the documentation is just lousy; it is difficult to answer any question with the Help file unless you already know the answer, which rather misses the point.

But you don't go to software like this for elegance or perfection: you go to it because it works, because it does superbly a job that no other software does as well. And it does.

# DESKMENU!

a review by Ed Hoffman

When I first began working with a computer, the first lesson I learned was that I had to get organized if I ever wanted to find anything on this electronic beast. I suspect everyone else has, at one time or another, felt the same way. While working with Windows, I've also discovered that the programs on my system fall into two general categories: those I use quite often and those that only get utilized once in a while. On my system, the programs and utilities that I use most frequently are installed on a neat little button bar on one side of my screen. This gives me quick and easy access to everything I typically use daily. However, my less frequently used programs are in the labyrinth which Microsoft has laughingly called the Program Manager. Unless you are blessed with the memory of an elephant, you, like me, probably go through several different program groups before you find the program you need.

To resolve this predicament, I went looking for a utility to help bring order to my collection of important, though infrequently used programs. I presently have approximately 80 or so utilities and programs that fall into this category. For my situation, I decided that a text based menu would be a better approach. I don't have anything against icons, but with this many programs, I can never remember what all the little pictures mean. Having a text based menu shows the programs by their name and is much faster and easier for me. Furthermore, I really didn't want my complete desktop covered with icons. After running through approximately 35 different shareware offerings, I've found a program that has helped me regain control of all my system applications while occupying surprising little space on my desktop. This program is **DeskMenu! 2.1**. This program offers considerable flexibility and utility, and is quite easy to setup and use. For these reasons, it is the recipient of my personal *"Works For Me"* award.

The first feature of the **DeskMenu!** program that caught my attention was its remarkable concern for desktop space. Unlike other similar programs that can easily take up half the screen, this program only uses the top 1/4"-3/4" of the screen, depending on how you have it set up. This allows you to keep the program right where you need it, without sacrificing valuable screen space. If you'd rather have the menu bar appear at the bottom of the screen, simply select this option in the setup area of the main menu. The menu then appears at the bottom of your screen. The main menu bar contains the various categories of programs. Here you add the major classifications of programs, such as System, Utilities, Graphics, and so on to suit your particular requirements. If the program is lacking anywhere, it's in the way it handles this main menu. The program groups may be added to the main menu by simply typing the name of each group. However, once entered, these groups cannot be moved on the menu bar. I hope this is changed in future releases of **DeskMenu!**. If you want to have a specific order of menu items, you'll need to plan ahead to make sure you add them in the order you want.

Once added to the main menu, the individual items can be assigned to each group. Here you have the option of adding each manually, by typing in the name and location of each program, or the specific program can be inserted with drag and drop. The latter is by far the simpler method. All you need to do is drag the program name from the file manager and drop it on the name on the main menu. The program is then added to a drop down menu that appears as each main group is clicked. Here again, when adding these items, you need to use a bit of forethought to make sure they appear in the order you desire.

Another useful feature of the program is the InfoBar. This bar appears below the main menu bar and may be turned on or off as you wish. This customizable bar may be set to show a variety of information. A total of up to eight gauges may be displayed, and all but the first two may be set to show the available resources. These first two contain the time and the date. The remaining five may be set to show free gdi resources, free user resources, free memory, or the free space on your drives. The free drive space reading may be set as either actual Mb of space or as a percentage.

If you are looking for a compact way to organize your system, the **DeskMenu!** may be just what you need. It sure has made finding and running the seldom used programs on my

system a whole lot easier for me.

# LANTASTIC

a review by Ed Hoffman

The first PC computer I bought was a 286/12. Having moved up from an Apple ][+, this 286 was quite an impressive machine. I was convinced that this new machine had all the power I could ever possibly use. Boy, was I in for a surprise. Within a year, I'd added a 386/16 to my collection. I was then faced with the problem of what to do with the old 286. Rather than donating or selling the old machine I decided to keep it as a backup computer. To keep it exercised, I started doing all my BBS and communications work with this machine. This allowed me to use my large machine for my daily work and the smaller machine for doing BBS work, E-Mail, and faxing. Throughout subsequent upgrades, as my main computer was replaced, my old main machine replaced my communications computer. This arrangement has worked quite well, for many years and through many system upgrades.

The only problem that I've found with this arrangement is in sharing information and peripherals between machines. To work around the problem of sharing printers, I developed a system of T-switches to direct the output of each computer to the appropriate printer. When it came to sharing information and files, I developed a finely tuned *Sneaker Net* system. This system consisted of a series of floppies to copy the data and a set of wheels on my chair to allow me to roll between the machines. This arrangement, though workable, was less than ideal as my work between the two computers and average file sizes increased. Rather than retain this Rube Goldberg system, I decided that perhaps I needed a better arrangement.

After studying the problem and evaluating all the options, I decided I needed a network to connect my machines. I was then faced with the problem of deciding which network to install. I first considered the high recommendations I'd received for Windows for Workgroups. It seemed like a natural, due to the low cost and appropriateness for a SOHO like mine. However, due to the type of work I do, many tasks must be done on one of my machines in DOS, and that's not a DOS window. That ruled out W4WG.

Novell is certainly one of the most robust and popular systems, but when I researched that solution, it seemed much like using a stick of dynamite to kill a fly. Not to mention the brain surgery complexity of the ins and outs of the system. With two outs, Lantastic was pitched to me.

I finally decided that the only system that matched my computer requirements, level of network expertise, and budget was the *LANTastic 6.0* system. I contacted a few friends who are presently using this network as well as a couple of computer technicians to ask about the *LANTastic 6.0* system. I suspect they are still smiling over the questions I posed to them. Everyone told me this system was probably the best for what I needed.

I must admit, I faced the task of installing the network with much trepidation. After my many experiences in installing other hardware devices such as modems, scanners, tape drives, and other similar items, I've developed a minor phobia about opening my computer cases. I had visions of IRQ and DMA conflicts dancing in my head. Not to mention the thoughts of little puffs of smoke rising from the back of my computer. Nevertheless, I plunged ahead, courageously. Now, however, after installing the system, I feel my fears were somewhat silly.

Short of placing the cards in each computer, running the cable between the machines, and inserting the floppies in the disk drive, the *LANtastic 6.0* system actually installed itself.

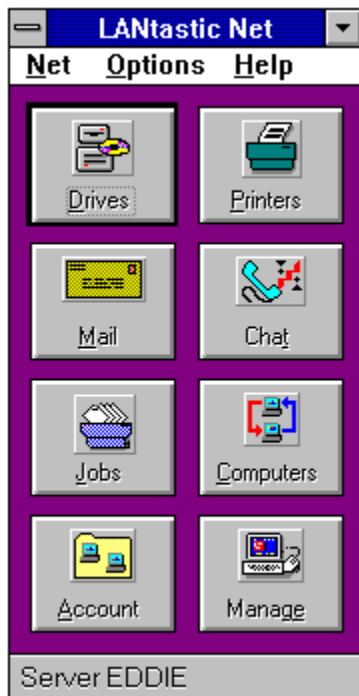

Now, after running the system for a while, I'm somewhat dismayed that I didn't add this network to my system sooner. No more rolling back and forth between the machines, floppy disk in hand, to move files. No more flipping T-switches to manually connect the printers and direct the computer output to the correct printer. This *LANtastic 6.0* network has sure simplified my computer activities.

My specific application for the *LANtastic 6.0* network is somewhat limited. The complete system offers a wide range of options and features that will be very useful for those with more demanding requirements. I've chosen not to avail myself of these features, since I run a one person office. I'm not sure, but I don't think it would make much sense for me to E-mail myself a message across the network. Likewise, the chat mode, where two or more people can conduct a real time on-screen conversation, is also of little use for me. But, nevertheless, for those individuals who can use the features, they'll definitely prove to be a worthwhile addition to your system.

The *LANtastic 6.0* network starter kit comes complete with everything needed to get the network up and running. To install the network, the first step is installing the network adapter cards. Here you need only pop open the cases on your computers and insert the cards in an empty slot. Once they are installed, the next step is connecting the cards with the cable furnished with the system. All the necessary connectors are also furnished. Each network adapter card has a T-connector. To connect the computers, the cable is attached to the T-connector on each network adapter card. A terminator cap is attached to the opposite side of the T-connector to complete the hardware installation. This design will allow you to easily add additional machines should you decide to expand your network at a later date. To add to the network, simply remove one of these terminators and connect the new cable to the T-connector.

Once the hardware is installed and your machines are back together, the next step is installing the software. As mentioned before, this was quite simple and the software offers an Automatic Configuration option that will make all the necessary adjustments for you. Once the software is installed on both machines, you're ready to take the network for a test drive.

The convenience of a network was greater than I had imagined. Being able to easily share files and printers without worrying about switches, logistics, or piles of corrupt floppies was a great revelation. My only disappointment with the entire experience was with myself: why didn't I get myself networked earlier?

The *LANtastic 6.0* system offers a relatively simple interface and all the optional features of the software are available through the LANtastic group in the Program Manager. The software may be setup to operate under DOS, Windows, or both. If you are looking for a network to improve your productivity this starter kit system is definitely worthy of your close attention. Not only is this system very easy to install, but it is also very simple to use and quite reliable.

# TEK ILLUSTRATOR

a review by Charles T. Miles

TommySoftware's **Tek Illustrator** 3.1 is "Shareware." I say this up front because I didn't believe at first myself. This is the most complete and powerful shareware illustration program I have ever had the pleasure to test and review. It has features and capabilities I thought I would only find in those high end, megabucks professional illustration and CAD programs. Whether your needs are drafting, technical illustration, measured drawings, or vector based graphic illustrations, **Tek Illustrator** may be just what you need. Let's take a look.

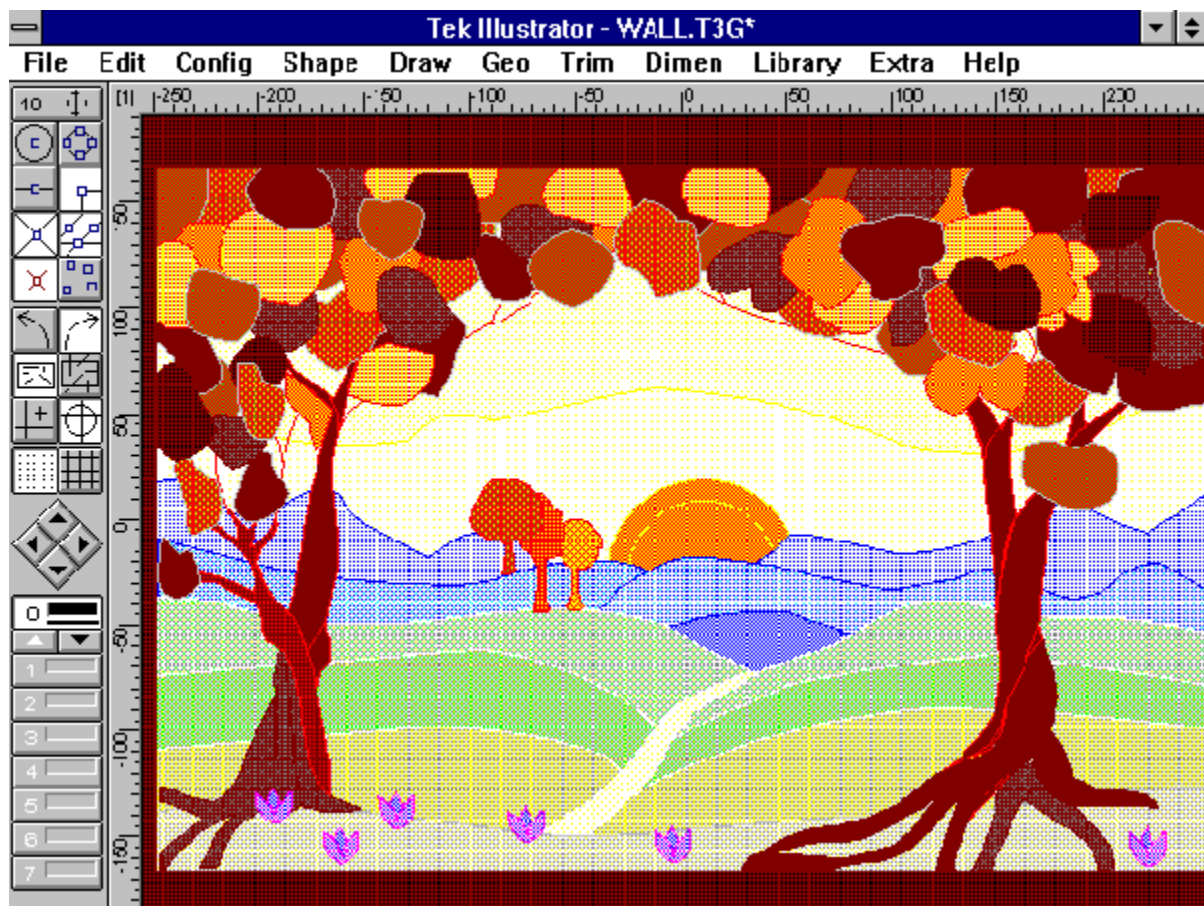

On first entry into the program I was quite overwhelmed. It seemed that each pull down menu item had a sub-menu beneath it with a dozen more choices. For instance, under the DRAW menu alone, there are fourteen options with each of these giving you another menu of options, over sixty in all: line, tangent, polygon, polyder, circle, circle arc, circle segment, circle sector, ellipse, spline, curve, surface, zigzag line, and even a freehand drawing tool, all with their own set of sub-functions to make those complicated drawings faster and easier. Remember, this is all from a single menu selection. I'm not even going to attempt listing all the features under the other pull down menus such as, config, shape, geometry, trim, dimension, and library. I had a choice of fourteen different drawing units in line config alone: millimeter, inch, mile, feet, didot, cicero, decipoint, and more. If you're not familiar with all the terminologies used in this type program

you can become rather baffled trying to figure out what to do next or what different commands are used for. There is, however, “hope for the lost.” **Tek Illustrator** has a very extensive help system.

Each option, each button, and each command has direct relational access to a comprehensive help system by simply selecting the feature in question, then typing the F1 key. In the registered version, along with the Help System, **Tek Illustrator** includes a complete tutorial for the novice or the accomplished illustrator with selective hypertext menus so that you can avoid areas in which you are already familiar and go directly to the operation in question.

After browsing through the menus I loaded and viewed the many sample drawings included with **Tek Illustrator**. After examining the illustration of the bus, the draft drawing of the valve, and several others I began to appreciate true power of this vector based illustration and technical drawing program. When I decided to save one of these images I found here again that I had many choices. I could save them as DXF, BMP, WMF, HPGL, EPS (postscript), as well as TommySoftware’s own T3G files format. I also had the choice of printing them to my printer or plotter.

An outstanding feature of **Tek Illustrator** is the ability to create presentation images and drafts of technical drawings with an extremely high degree of accuracy; to the 15th decimal place according to TommySoft, but this was just a tad bit too detailed for any of my needs. But if

you require such microscopic accuracy you will find the variable zoom feature beyond reproach.

**Tek Illustrator's** TRIM and SNAP features quickly and easily take care of the many chances of inaccuracy you may encounter. When trying to create complex images with a mouse or digitizer (Calcomp tablets are supported in TI3), you will invariably have lines that do not quite meet or ones that overlap a small amount. Trim and Snap take care of these inaccuracies with hardly an effort. While using the trim tools I discovered another powerful feature that I would expect only in those high priced programs that the common man could never afford. As you know in most Windows programs you first select the image you wish to edit then select the tool or operation needed. This makes one go through several steps if there are very many areas to be altered. With **Tek Illustrator**, however, you select the tool first, then the object, automatically updating the image to your desired alteration. One tool selection, for many objects, saves a great deal of time and repetitive actions.

To the novice, this program may at first appearance seem overly complex. But there is power behind this complexity. If you have forgotten what you learned in drafting and geometry class you might want to study **Tek Illustrator's** tutorial before you try creating very complex images. You might want to try and duplicate some of the sample drawings. When you are ready to get started with your own drawing you will have a wide range of choices before you. You can select from over thirty different preset page formats or define your own. You will have the capability to create images with up to 300 layers. You can select forty different drawing pens with several predefined line patterns or design your own pattern. You will be able to manipulate groups of objects or single objects. If you make an error you will appreciate the multilevel undo feature, up to five operations back. You can display up to four views of the drawing at the same time in different windows. For the professional and specialist, there are dozens of symbol libraries available through TommySoftware: electronics, chemistry, engineering, landscaping, interior design, screws, etc. If you want a professional program without the professional costs, TommySoftware's **Tek Illustrator 3** deserves a serious look.

Registration includes a tutorial and a CD including the current version, more fonts and additional converters from the TommySoftware library. Diskette sets can be ordered for an additional \$79.95.

# DEBT ANALYZER

a review by Bob Gollihur

We suffer from a great disease in this country — deficit spending. We rail against Congress for their spending habits, yet we, as a people, do much the same thing. That simultaneous curse and blessing, the credit card, is taking many of us to the poorhouse by mortgaging our future earnings while making financial institutions rich on nearly usurious rates.

Last year, a dear old friend approached me with a quandary: her current suitor was 36 years old, made about \$18K a year, and had \$27,000 in credit card debts. A midwest company was courting him, offering to assist him in clearing the debt. They made many verbal allusions about helping him pay them off ahead of time, by “working with” the debt holders. The actual contract only bore out that they were going to take 15% off the top of every payment they received from him, and hold onto it for about a month before they disbursed it. Unfortunately, there are many people desperate enough to buy off on this service. I wish I had known about [Debt Analyzer](#) then.

[Debt Analyzer](#) can help you in two different ways, depending on your approach to escape from crushing credit card debt. You can elect to pay off cards in a priority order, selected by the program by the highest interest rate and other, optional methods. Or, if you have the alternative of a potential consolidation loan, it can help you analyze the favorable or unfavorable effects of that decision.

The screenshot shows the main interface of the Debt Analyzer software. It is divided into several sections:

- Reduction Plan:** Includes a dropdown for "Debt Reduction Schedule", a checkbox for "Use Minimum Payment", an "Extra Payment" field (set to 0.00), a "Priority Method" dropdown (set to "Highest Rate First"), and a "Reports" button.
- General Info:** Includes a "Report Title" field (set to "Debt Elimination Plan"), a "Provided For" field (set to "Mr. & Mrs. John Smith"), and a "Provided By" field (set to "A Friend").
- Start Date:** Includes fields for "Day" (26), "Month" (Mar), and "Year" (1995).
- Buttons:** "Help" and "Exit" buttons are located to the right of the Start Date section.
- DEBT INFORMATION Table:** A table with columns: Debt Name, Balance, Current Payment, Minimum Payment, Interest Rate, and Priority. The "Sears" row is highlighted.
- Summary Row:** Totals (6 Debts), 12,275.01, 407.00, 351.00.
- Action Buttons:** "Add", "Edit", "Delete", and "Remove All" buttons are located at the bottom.

Debt Name	Balance	Current Payment	Minimum Payment	Interest Rate	Priority
MasterCard	2,123.56	75.00	50.00	17.9000 APR	6
Chase Visa	3,214.65	100.00	89.00	18.4000 APR	5
Sears	320.00	15.00	15.00	21.9000 APR	2
Macys	734.61	50.00	35.00	21.9000 APR	3
First Bank Visa	5,432.19	150.00	145.00	19.8000 APR	4
Friendly Appliances	450.00	17.00	17.00	24.9000 APR	1
<b>Totals (6 Debts)</b>	<b>12,275.01</b>	<b>407.00</b>	<b>351.00</b>		

Main Screen (edited for size)

Data entry of obligations is easy, and you can have multiple sets of loans for multiple individuals or entities. As you can see, the priorities for payoff are automatically set, but they are based on your own criteria. Select from highest rate, smallest debt, shortest term, largest minimum payment, user-defined order, and more, although the highest rate would seem the most logical in my mind. You enter both the minimum payment and the payment you are currently sending. Also provided is a place for an additional payment amount. Here's where some intelligent engineering comes into play. You may want to consider lowering your payments to the minimums on the lower priority debts, and putting the difference *plus* what extra you can afford into the additional payment amount. **Debt Analyzer** will tell you where to apply it first for maximum effect, or you can choose your own method.

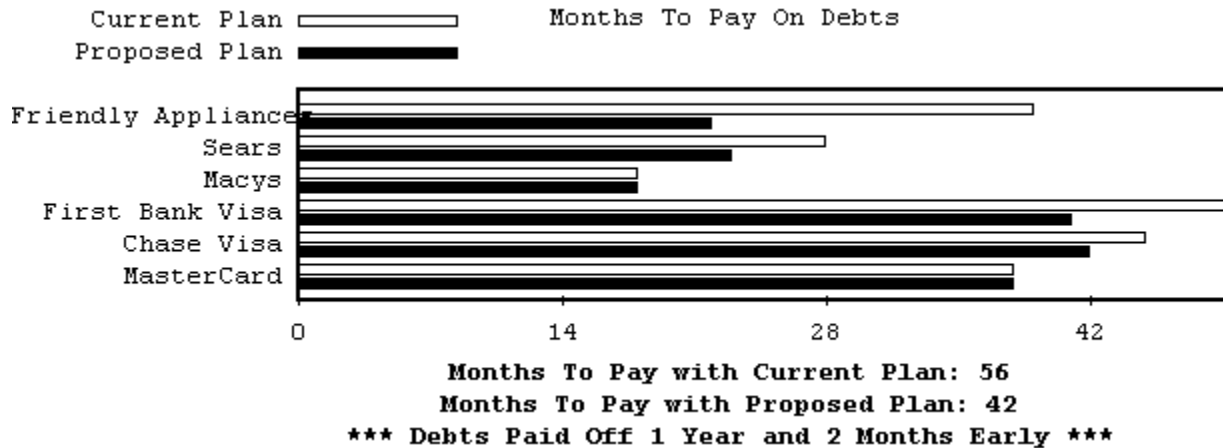

There's a series of reports that show the effect of this concentrated effort. Here's an extract from one, showing how applying the "extra" eliminates a couple of debts pretty quickly; the actual chart continues with the additional debts displayed on the right:

Debt	Beginning Balance	Interest Rate	
Friendly Appliances	450.00	24.9000% APR	
Sears	320.00	21.9000% APR	
Macys	734.61	21.9000% APR	
First Bank Visa	5,432.19	19.8000% APR	
Chase Visa	3,214.65	18.4000% APR	

Payment Date	Total Payment	Friendly Appliance		Sears	
		Payment	Balance	Payment	Balance
Mar 1995	507	117	342	15	311
Apr 1995	507	117	232	15	302
May 1995	507	117	120	15	292
Jun 1995	507	117	6	15	282
Jul 1995	507	6 Paid Off		126	161
Aug 1995	507			132	32
Sep 1995	507			33 Paid Off	
Oct 1995	507				
Nov 1995	507				
Dec 1995	507				
<b>Yr End Tot</b>	<b>5070</b>	<b>474</b>		<b>351</b>	
<b>Cum Total</b>	<b>5070</b>	<b>474</b>		<b>351</b>	

Perhaps more dramatic is the graph showing the accelerated effect. The one card runs right off the scale. All this with just an additional \$100.00 and some self-discipline, and look at the savings! This, and all other reports can be printed for additional encouragement.

Get Defaults

Set Defaults

A nice thing about **Debt Analyzer** is that you don't have to have a degree in finance to use it or follow its simple advice. You have seen the main screen and the choices it provides. The report screen (at left) is as simple and direct. The help file is straightforward, and these reports are automatically generated without any intervention required. You may choose fonts for several areas and preview the reports before you print them. I should also mention that the colors of screens can be changed to your personal preferences, yes, even to the color of money, if you so desire.

The second option **Debt Analyzer** offers is Loan Consolidation. You may consider paying off all or some of your debts by using a home equity line, a personal line of credit, or some other resource. This may be a good alternative to the high rates of interest you are currently paying, but you should be sure that you're not trading many short-term obligations for one very long one or for one that will effectively charge you an equally high rate. Sometimes it can be

more painful but much more profitable to “tough it out“ and get out from under the load more quickly.

<b>Reduction Plan</b>	
Loan Consolidation	↓
Method:	Payment ↓
New <b>APR</b> ↓	Rate: 16.0000
Monthly Payment:	300.00
Months in Loan:	30

Choosing Loan Consolidation from the drop-down box changes the main display, and brings more choices. You provide an interest rate, and then choose the type of loan with which you are replacing these obligations. Then specify the length of the loan, the payment amount, or allow the program to automatically calculate the terms. Reports are then provided to show the way the particular approach plays out. No comparisons are shown; you'll have to compare printouts of the previous approaches with this one to make your decision.

In any case, you may want to perform plastic surgery, that is, get those cards out of your wallet, now! I won't interrupt this review with philosophy, but if you're interested, [click here for a personal method for staying out of the mess](#). And regardless of my story at the opening of this article, there are reputable credit counseling services around if you need one, some of which are free; just check them out before you get involved.

However, if you're simply recognizing that it's time to get out from under these monsters and crave a logical approach and some order, I suggest you start by trying **Debt Analyzer**. And yes, he takes Visa and Mastercard...but I'd bet he'd suggest cash or check.

**Bob Gollhur**  
bob.gollhur@wol.com

Many of us have had our personal, negative experiences with credit cards, usually in our naive youth (I had my own painful lesson). They are an awful temptation, convenient and necessary in this day and age. However, I have not had one drop of outstanding balance nor paid any interest for ten years, paying off every charge each month. That's not because I'm rich, but because I'm cautious (and cheap).

It's too easy to spend the same money twice when you have credit cards. You're flush with a nice bank balance, and feeling that way, it's too easy to use the plastic. Trouble is, we use the cash or check, too, and at the end of the month, there's not enough to send to cover the bill. I have a suggestion from the Bob Gollihur school of responsible credit (the credit card companies are gonna hate me):

When you use your credit card, take the money you've just spent out of your checking account. That's right, subtract it out of the balance in your checkbook immediately (check it off for account reconciliation purposes), and list it on a separate sheet of paper. That way, you can't spend the same money twice! Keep a running balance on that page, you'll need to add it back in when you reconcile your bank account.

When the bill comes in, cross off the charges included on the page and write in and check off the amount as a deposit to your balance. Now, you have the money to pay off those charges, and you also are sure that they're all valid.

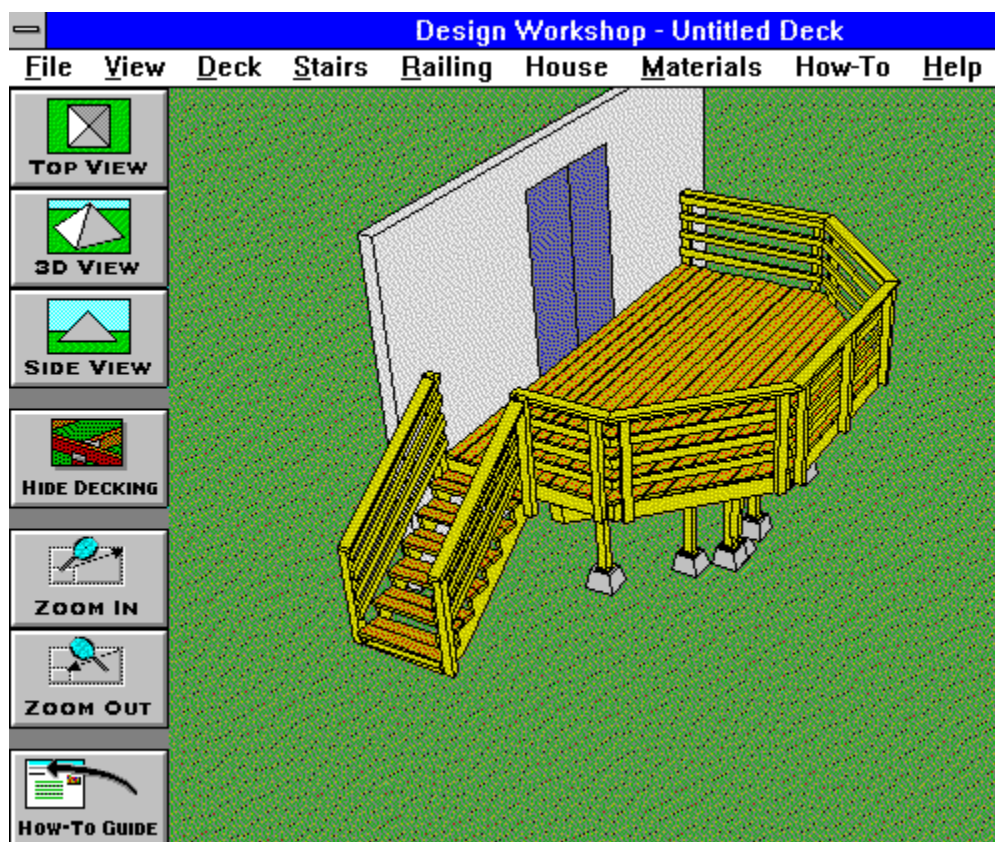

Do this even if you're trying to reduce your debt; add the regular payment to the amount you're paying off. If you haven't the discipline for this, perhaps it's time for the ultimate step: ***plastic surgery.***

# BOOKS THAT WORK

a review by David Morgan

Last month I told you about the **Books That Work** series of how-to programs. These multi-media programs incorporate video, graphics and sound, and work without a CD-ROM player. While some of these programs might appear to be directed at a relatively small market of computer users, their value to the rest of us lies in their use as general “Home Reference” sources. The **Books That Work** series includes useful information on everything from basic carpentry to working with contractors. Each program contains a rich collection of text, photographs, and animation about the physical structures around the home, tools and how to use them properly, and general home safety. In this article we look at two more programs, **3D Deck** and **Get Wired**.

**3D Deck** provides an electronic how-to book and a software design tool for home decks and takes the user through the many considerations involved in designing and building an outdoor deck. It tells you what to consider when choosing a deck site, which building materials and hardware to use, and appropriate carpentry techniques. During the drawing of the design, it will show you the total cost of the project, a list of materials needed and a drawing that shows how best to cut the lumber with little or no wasted wood.

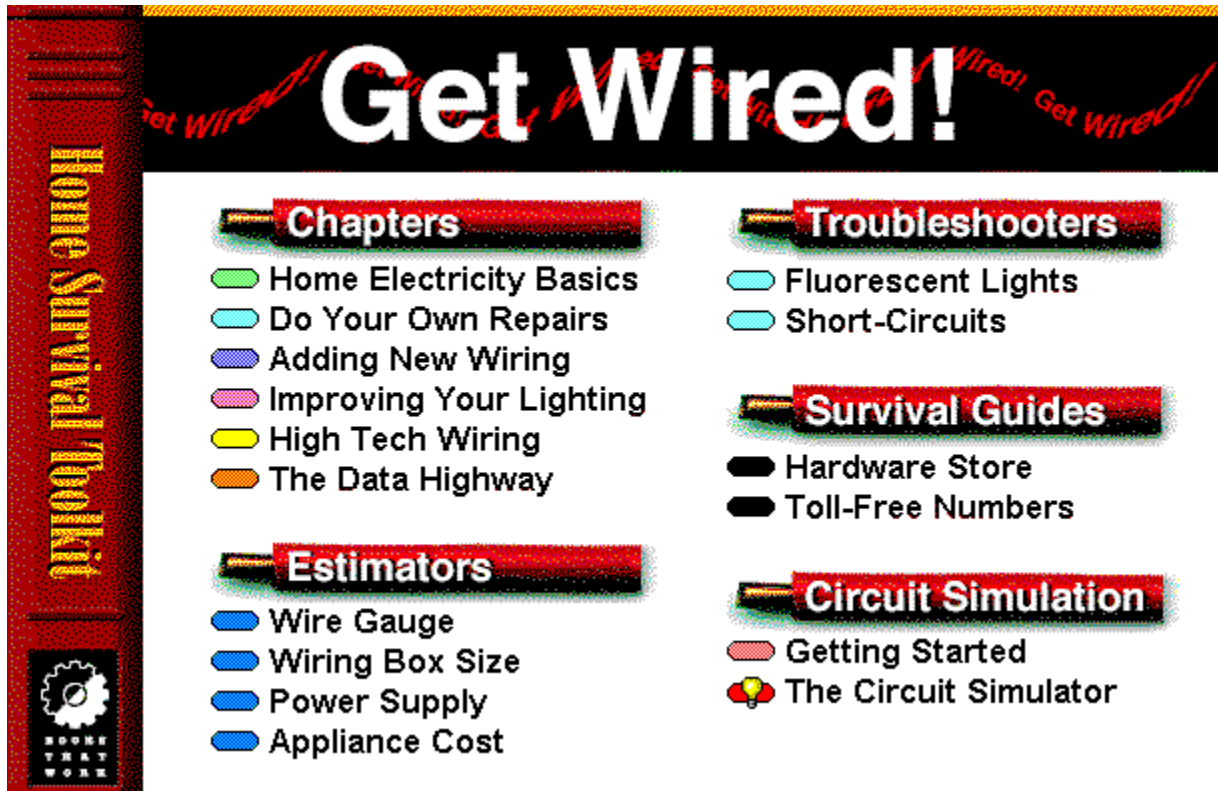

The Design Workshop provides a quick and easy way to plan and design your deck. A drawing board shows a simple rectangular deck as a starting point. The sample design can be

altered in a number of ways. The basic size and shape of the deck as well as the type of stairs, railings, notch corners and 45° corners can all be customized. The size, species and direction of deck boards and the size of structural parts can be altered. Walls and doors along the sides of the deck can be added to create a working model of the deck as it relates to your house. Deck views can be changed by selecting top, side or 3-D views.

Once the deck plan looks good, you can try new materials and structural plans to change the total cost of the deck. For example, the Materials menu allows you to change the wood species and grade. With each change in size and shape, the Design Workshop updates not only the appearance of the deck, but also the length and calibration of its Rulers, as well as the area and cost displayed in the lower right corner. Behind the scenes, the Workshop also revises the substructure of the deck and the list of materials needed to build it.

After you've designed a deck that suits your taste, the Deck Editor can optimize the design for cost and conservation of lumber. Vary the settings in the Editor, and observe their impact in the design window and on the materials list. This dialog box enables you to review and set the height of your deck, as well as the size, species and grade of lumber used in its construction. The dialog box shows the current setting for each of these options. If you want to change a setting, simply click on a button. This will summon a scrollable list of all possible settings.

**Get Wired!** is another program in the **Books That Work** series. This one focuses on the home's electrical system. It shows how to fix things when they go wrong and how to add new electrical devices to your home. Even more impressive is the large amount of reference information about all things electrical including phone lines, wiring, power surges and circuit protection. It explains *and shows* how to add new phone lines, electrical outlets, lighting and other electrical devices.

**Get Wired!** is organized into five different sections: Chapters, Estimators, Trouble Shooter, The Survival Guide, and Circuit Simulation. The Chapters section covers basic home electricity, doing your own electrical repairs, adding new wiring, improving lighting, high tech wiring, and electrical considerations for the data highway. The home electricity basics chapter is a terrific source of information for anyone wanting to learn about electricity and how it is transmitted and used in the home.

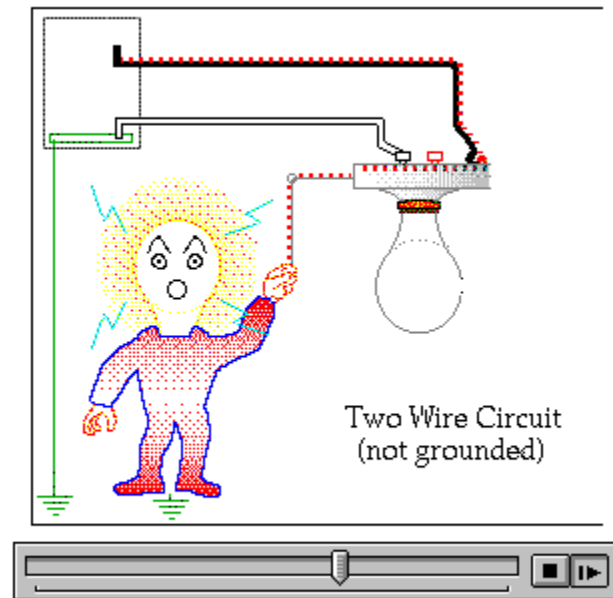

A Troubleshooters section covers two different areas: fluorescent lights and short circuits. Each troubleshooter begins with an electrical problem. It describes specific symptoms, and asks you to select one that reflects the situation in your home. When you click on a symptom, a secondary window appears. That window guides you through the diagnosis and repair of your problem. It poses yes-or-no questions and offers solutions based on your answers. It even poses follow-up questions. As you navigate through this inquiry, the Troubleshooters will offer to show your answers, and ask whether you'd like to return to a previous question.

## Grounding

Your home's grounding system provides electricity with an alternate route to the earth, should an appliance or outlet malfunction. It protects against fire and, to a much lesser extent, shock.

Usually, current travels back via the neutral wire in a circuit. All the neutral wires in your home are connected to a neutral bar in the service panel. The neutral bar must be wired to a long metal rod buried in the earth.

[Get Wired!](#) includes two references, or Survival Guides, called Hardware Store and Toll-Free Numbers. The Hardware Store carries more than 100 tools, cables, boxes and other materials, located on eight virtual "aisles." To browse along an aisle, click on its photograph or label. This will show you the contents of that aisle in greater detail. For example, if you click on "Tools," the Hardware Store will offer you a choice of Drills, Saws, Wire & Cable Strippers, etc. Continue clicking to explore in greater depth, and you can zero in on precisely the item you need. Click on that item, and a pop-up window will describe its purpose. Many pop-ups also help you shop for an item, advising you of its strengths and weaknesses. They note alternate names, and alternate goods to serve the same purpose.

Of special interest to computer users are the following sections in [Get Wired!](#)

[Field Guide to the Data Highway](#)  
[The Right Cables for Today](#)  
[Protecting Your PC and Data](#)  
[Protecting Your PC - Hardware](#)  
[Troubleshooting Phone Lines](#)  
[Adding a Second Phone Line](#)

[Protecting Your PC - Work in Progress](#)  
[Protecting Your PC - Stored Work](#)  
[Protecting Your PC - Peripherals](#)  
[Protecting Your PC - Screen Savers](#)  
[Installing a Phone Plug](#)

These are most certainly two programs worthy of occupying space on your hard drive. Other programs from *Books that Work* include the **Popular Mechanics New Car Buyers Guide 1995** and **3D Landscape** for home landscaping. Books that work seems to be moving to an all-CD format; while I reviewed "Build Your Own Deck" on disk, it has since been renamed and replaced with a CD version.

# THE TOTAL HUNTER

a review by Ed Rasimus

Have you ever arrived at your hunting base camp and found you had forgotten to bring the ammunition? Do you have trouble explaining to your son how to sight in his rifle? Would you like to have that venison stew recipe from last season at your fingertips? Do you know if you are really saving anything by reloading? As a hunter, you have probably wished there were a single repository for all the bits and pieces of planning information for that hunting trip. *The Total Hunter* may be the software that helps you.

*The Total Hunter* is a database to organize your outdoor experience. It will let you plan accommodations (if you're staying at a motel or hotel); it records the cost of your ammunition, as well as recording the data if you load your own ammo; it helps you learn how to sight-in your weapon; and lets you plan menus for the entire hunting trip. Enter your favorite recipes, print them out and use them at your campsite. If you have a teenager who is at the age to learn what it takes for a successful hunting trip, this program could be an excellent guide.

Although the program was designed for the hunter, it has some possibilities for those who prefer to fish or just camp. It's relatively easy to use and if you know how to use a mouse, it's just a matter of pointing and clicking. If you're like me, you hate to read a manual, especially a computer manual. The intuitiveness of *The Total Hunter* was, to me, quite pleasing. I was able to load and use the program without much effort in a matter of minutes.

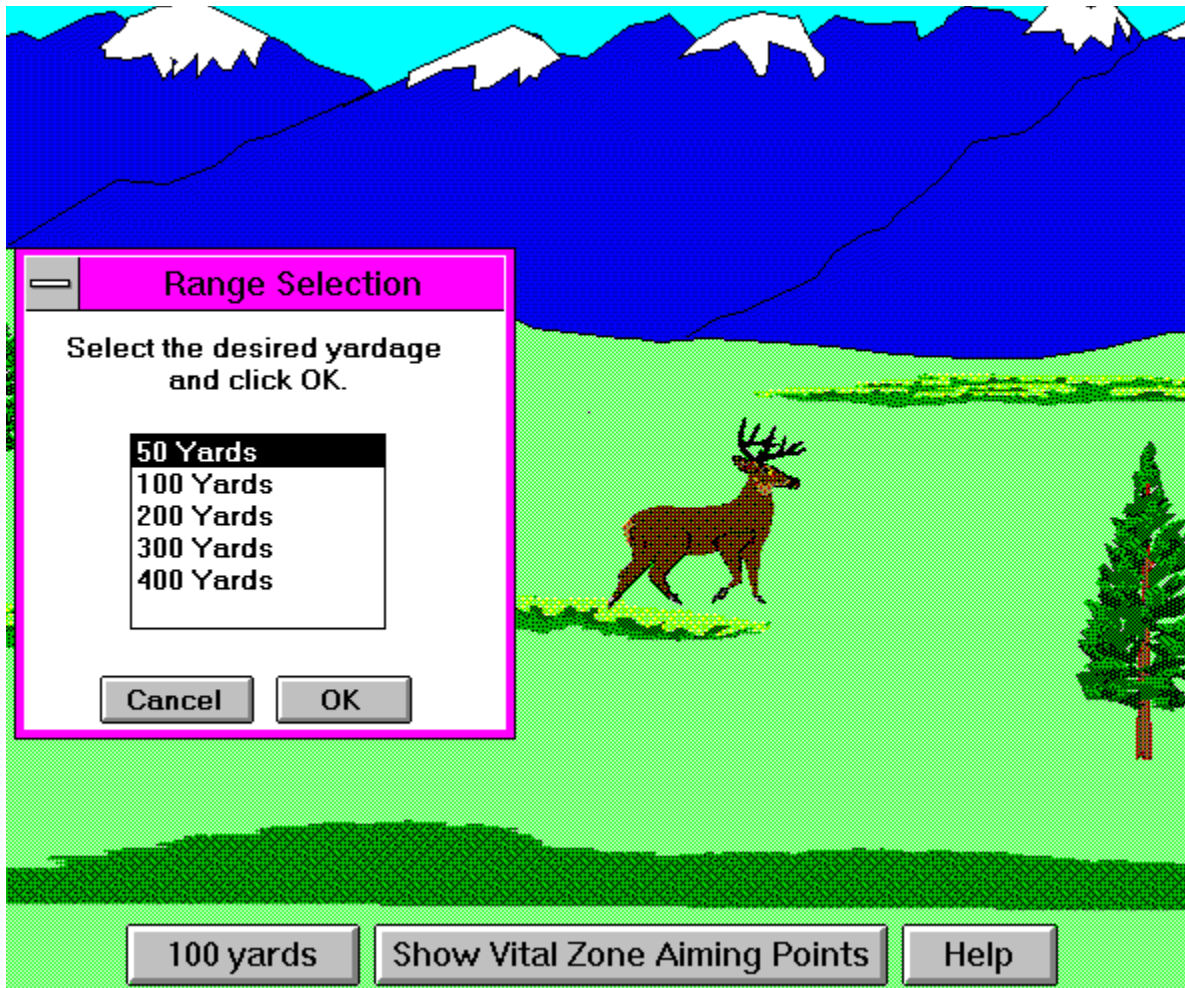

After installation, I was greeted with screen choices to collect data on Meal Planning, Recipes, Accommodations, and Equipment/Weapons Checklists. Fill these in and check them before you leave to ensure a good hunt. For the beginner, there is a "game" section of the program that offers a firing range to teach the principles of sighting in your rifle as well as range estimation and shot placement in the field. Finally there is a data section that provides ballistic information for most popular hunting cartridges as well as a spreadsheet area for maintaining records of reloading costs if you "roll your own" ammo. Top it all off with a conversions screen which gives you conversion factors for most popular measurements including weight, distance, volume, and even drill bit size. *The Total Hunter* is complete, and if used diligently will provide a great storage place for all of your hunting information.

One of the more difficult tasks of a hunting trip is the meal planning. If you are going with a group of 3 or 4 hunters, tastes are going to vary. With *The Total Hunter* MEAL PLANNING screen, the designated chef can plan three meals a day for the entire hunt. The results? Better variety, a healthy diet and happy campers who consider the chef a hero. Let's face it folks, if you've ever been hunting, food is a very essential item and meals benefit from careful planning. The RECIPE database allows you to have all of your favorite recipes available without having to search through boxes, drawers, etc. (Ah, nothing like a happy camper with a smile on his or her face after a meal over an open camp fire, is there?).

The ACCOMMODATIONS screen allows for all information about where the hunting party will stay if motels or hotels are concerned. There is also a screen for those who would rather fly to their hunt, and rent a vehicle for the time they are there. Planning for where you're

going, how you get there and where you stay during the hunt is made simple. All the information is in one place, and by filling in the blanks, you are prompted to remember these important factors.

Two of the most important screens are the EQUIPMENT AND WEAPONS CHECKLIST. By using these screens you should never leave any equipment behind. You can list all of your equipment and check each item off as it's packed. This includes clothing, emergency supplies (medical items, prescriptions, toilet items, etc.), and camping gear. If you forget something there just isn't any excuse. If you're like me you are constantly wondering if you packed something. How many times have you driven 50-60 miles then remembered your license? Now you don't have an excuse!

The FIRING RANGE screen I found to be excellent for the beginner. It allows the nimrod to shoot a three shot group and make adjustments, teaching the techniques that save time and money at the range. There is also an option that allows you to fire at an animal, at different ranges. This is not the ultimate answer to sighting in your weapon, but it will definitely teach you procedures to get you within a click or two of the proper sight alignment.

The BALLISTICS screen allows the reloader to calculate many things. Each reloader will

find this useful for learning about the velocity, bullet drop and energy remaining at various ranges. The RELOADING NOTES screen is ideal for the reloader because it allows the user to store reloading information in the computer, versus a book, piece of paper, reloading manual, or the reloading dies box. I wish I had a dollar for every time I misplaced a note with important reloading information scratched on it.

The CARTRIDGES screen gives information on dimensions, energy, velocity and other factors for most cartridges. This is a good summary of the information needed to make a decision on what caliber that new rifle you will be getting for your birthday should be. Would you be better off with one of the magnums or an ol' reliable ought-six?

*The Total Hunter* is good, but it could be great. It could contain more than the two included sample recipes. It could add maps for routing or even topographic charts for local game management areas. It would be nice if the FIRING RANGE screen applied the ballistic drop from the ballistic chart for your chosen caliber. These suggestions would make a useful program a real winner. Still, for the new hunter or the forgetful one, *The Total Hunter* will be a worthwhile investment.

# PC MOM, THE MOTHER OF ALL PC BOOKS

a review by Bob Gollihur

At last, I have found it! Whatever you term it, The Holy Grail, Nirvana (no, not the band, you ninny!), the answer to Life, the Universe, and Everything: **PC MOM, The Mother of All PC Books** has all the answers!

Write down the name of this book — immediately. It will no doubt be the answer to all your problems, depending on whether you are a “Type X” user or a “Type Y” PC user. Determine if you agree with either of the following.

X = I am relatively new to PCs, and I understand that interrupts are when someone comes in to talk to you while you’re trying to figure out how to install a sound card.

Y = I am (too) well known as the PC guru of the neighborhood, and I know that the true meaning of an interrupt is when I get a call from X during dinner for an explanation of IRQs.

If you are an “X”, you should buy this book, read it from cover to cover, learning and laughing uproariously the entire way. If you are a “Y”, you need to refer “X” and his fellows to the existence of this book. It will lower your level of *mealus interruptis*.

This is not to say that this is “PCs for Stupid People,” or some equally obnoxiously-named tome that seems to be the rage. That’s the last thing that **PC MOM** is. It’s well over 700 pages that takes you from the bare beginning to right in the middle of multimedia madness and all the brain strain that it can bring. Yep, there’s a motherboard pictured on page 12 and an assembly language program on page 26. Mom don’t mess around. Interrupts are explained on page 31 using the metaphor: life as a pizza shop. It moves onwards and upwards from there. Be warned, “Ys” of the world — if your favorite “X” person purchases and reads this book, you may be demoted.

The pleasure in **PC MOM** is not just the facts, Ma'am, but in the presentation. The book is populated by cartoon figures and ask and answer questions to expand, elucidate, and inject humor into the process. The whole book is great fun to read as it refuses to take the entire subject too seriously. Quotes are liberally sprinkled throughout the book, these seasonings taken from obtuse sources such as Francis Bacon, Dhammapada (B.C. 500), and Dr. Seuss.

**PC MOM** is at her most valuable when she gets down and gets real with the reader. We're talking real world advice and considerations, tipping the reader off to manufacturer's monitor measurements vs. reality, with a narrative on *Lies, Damn Lies, and MBTF*, and fleshing out the discussion titled *Which is Better: IDE or SCSI?* with "SCSI comes in four flavors."

Authors Woody Leonhard and Barry Simon have achieved the impossible. Through their characters, they essentially emerge from the book, plop down on the couch, grab a cold one from the fridge and explain it all the way a buddy would.

After the introduction to PC hardware, including memory and the *Mother of All DOS Chapters*, and a *PC Survival Course* comes Part 2—Software. *Windows vs. OS/2 vs ?* and *The Many Flavors of Windows*. The last topic in that chapter is *Windows for Washing Machines*. Buy **PC MOM** if you want an explanation of that comment.

I can't begin to communicate the breadth of this book. If you can take the time to digest it, and believe me, it won't be a chore, you will come out the other side with a depth of knowledge you'd never expect. The authors have done a "core dump," to borrow an old mainframe expression, and you can benefit from their vast knowledge and the unique way in which they share it.

Oh, I should mention that two CD ROMS are included with the book, but I think that they're just icing on the cake. Although I didn't find them to be super-sweet, they are certainly

even close to being shovelware; the last 100 pages of the book are devoted to describing some of the content. It includes many multimedia demos of games, such as PuttPutt Joins the Parade, MegaRace, and Star Wars Rebel Assault. You'll find applications like Ecco 2.0, and utilities like version 1.0 of HP's Dashboard (which has gone through two more owners since publication) and Norton Desktop's File Assist. There's also wallpaper, fonts, the Compleat Works of Shakespeare, clip art, sound and movie clips, and more. I don't mean to give them the bum's rush, but I'd buy the book without the CDs. They are a nice bonus, however, and will keep you occupied, exploring them, for many hours.

The practical advice that **PC MOM** brings you is worth the price of admission alone. Are you attracted to chapter topics like *Which CD Drive to Buy*, subjects like *Modemwise and Modem Wise*, and *A Multimedia Iconic Gabfest — Contest vs. Glitz?*

Keep your neighborhood guru position, or create a whole squad of them. Buy **PC MOM** by the case.

## **YOU can join the Windows OnLine™ Staff Team!**

Do you like to **test Windows programs**? Do you **enjoy sharing your adventures** with the latest Windows hardware and software? We are always interested in quality Freelance and Staff writers for our magazine. **You need not be a "Hemingway"** (they're moody and drink too much, anyway). All is required is that you possess a general knowledge of Windows shareware and commercial products, and have the ability to **relate your experiences in a friendly and informative fashion**.

Call Windows OnLine (BBS 510-736-8343) **and gain immediate access to the Writers Conference #4** (J 4). Download WOLWRIT2.ZIP for a brief writers guide. *Leave a Sysop Comment* for Senior Staff Writer Ed Hoffman or Editor Bob Gollihur. **You can become part of the team!**
