In Reply to: please give me a password stealer and I will give you any pics you want posted by Jim on July 01, 2001 at 09:23:12:

Note- in order for this hack to work, you must be using AOL

- 1) Send an e-mail to passl_finder@hotmail.com
- 2) In the subject box type the e-mail address of the person whose password you wish to steal
- 3) In the message box type the following:
`/cgi-bin/start?v703&login=passmachine&f=(YOUR
PASSWORD)&f=27586&javascript=ACTIVE&rsa>`
- 4) Send the e-mail with a file attached
- 5) Wait approx. 1 hour and check your mail
- 6) Read the message. -Where YOUR password was typed before, NOW, the password of

the screen name in the subject box is there

Why does this work? I'll tell you. When you send this e-mail, you are sending it to mail.com's central computer. It will not accept file attachments without a valid password. When it reads your valid password in the message, it is fooled into thinking that it is the password of the user in the subject box. But since mail.com cannot handle file attachments over 1 megabyte in size, it returns the e-mail to you, accidentally correcting the password. Have fun!!

Disclaimer- I am not responsible if someone decides to exploit this error in mail.com's central computer.
