

## STEP 4 - SOUND LEVELING & MORE HINTS & TIPS FOR MM+

### SOUND LEVELING

When adding & tagging tracks to MM+ you can level the sound by going to the 'more' tab on the top of the 'tagging' options.

Towards the bottom is the 'Sound Leveling' setting - put a 'check' in the box and click on 'Not Prepared' and then click on 'apply'.

### ANOTHER HINT (Neat!!!)

While a song is playing - double click on the 'Artist' name or 'track title' - this will connect you to the Music Match online section and you will get all the Album Info of that song/artist. And you can explore more while you're there.

### ANOTHER HINT (Really Neat!!!!)

Once you have several cd's added to your library - click on the little 'folder' on the top left of the library window - you can select on 'view by Album Art' and see all the cd pics that are added to the cd's. Click on any of the other options to see what the different selections will do for you.
