

# INTERNATIONAL TELECOMMUNICATION UNION

## ITU-T RECOMMENDATION SUMMARY

**Rec. No. :** F.104

**Title :** International leased circuit services – customer circuit designations

**Study Group :** I - Services

**Version :** New

**Date of adoption :** 1991

Notes :

CCITT Recommendation M.140 (Designations of international circuits, groups, group and line links, digital blocks, digital paths, data transmission systems and related information) specifies a scheme for the designation of international routes.

The designation scheme is based on a layered approach with:

layer 1 – a unique identification providing limited information;

layer 2 – additional information that must be known at both termination of the route; and

layer 3 – (optional) – bilateral information not the subject of international standardization.

Recommendation F.104 precises the way in which Recommendation M.140 is applicable to customer international circuit designations.
