ITU-T RECOMMENDATION SUMMARY	
------------------------------	--

Rec. No. : I.255.4	Title : Priority service
---------------------------	---------------------------------

Study Group : I - Services

Version : New	Date of adoption : 1990	Notes :
----------------------	--------------------------------	---------

The Priority service provides for preferential treatment in the network to calls originating from and/or addressed to certain numbers in the order of path selection.

This service provides preferential treatment in the network for calls:

- originating from subscribers' lines. This is designated as A-priority; and/or
- addressed to certain emergency numbers. This is designated as B-priority and concerns the order of path selection in the ISDN.

For A-priority, subscribers' lines are classified into two A-priority categories which are:

- subscribers with first order priority (I) for all calls;
- subscribers with first order priority (II) on a per call basis.

Only one B-priority category is envisaged.

To order the complete text of this Recommendation, please use the Order Form for ITU-T Recommendations. An electronic version of this form is available on ITUDOC (Winword 2.0: UPI=ITU-5265; ASCII: UPI=ITU-2488).
