INTERNATIONAL TELECOMMUNICATION UNION

ITU-T RECOMMENDATION SUMMARY

Rec. No. : I.321	**Title :** B-ISDN Protocol reference model and its application

Study Group : XVIII - ISDN	

| **Version :** New | **Date of adoption :** 1991 | Notes : |

Recommendation I.320 contains the description of the ISDN protocol reference model (PRM). Recommendation I.321 is based on the ISDN protocol reference model as defined in Recommendation I.320, and wherever not explicitly indicated, it should conform with Recommendation I.320. The purpose of Recommendation I.321 is to take into account the functionalities of B-ISDN, which may eventually be incorporated into Recommendation I.320, as an expansion of the existing ISDN protocol reference model. The Protocol Reference Model in Recommendation I.321 is called "B-ISDN PRM" (protocol reference model of the broadband aspects of ISDN).
