

## SECTION 3 - INTERWORKING BETWEEN DIGITAL SUBSCRIBER SIGNALLING SYSTEM No. 1 AND SIGNALLING SYSTEM No. 7

### Recommendation Q.699

#### INTERWORKING BETWEEN THE DIGITAL SUBSCRIBER SIGNALLING SYSTEM LAYER 3 PROTOCOL AND THE SIGNALLING SYSTEM No. 7 ISDN USER PART

#### 1. General

##### 1.1 Introduction

This Recommendation defines the interworking relationship between the layer 3 functions and protocol of Digital Subscriber Signalling System No. 1 (DSS 1) and the ISDN User Part functions and protocol of Signalling System No. 7.

The interworking between the above two signalling protocols typically may occur in an ISDN local exchange and is specified in the context of a typical call in a pure ISDN or mixed ISDN/non-ISDN environment.

##### 1.2 Purpose

The purpose of the Recommendation is:

- a) to define how the layer 3 protocol of DSS 1 and Signalling System No. 7 ISDN User Part protocol should be used in combination with call control functions, to support the basic bearer service;
- b) to provide a logical bridge between the abstract signalling information flows, which are used in the description of ISDN services, and the corresponding messages and elements of procedure of the ISDN User-Network Interface User Part protocols.

##### 1.3 Scope

This Recommendation is aimed at defining the interworking relationship between the call control protocol of the Digital Subscriber Signalling System No. 1 and the ISDN User Part of Signalling System No. 7.

The Recommendation defines in detail the relationship between signalling information conveyed via the Digital Subscriber Signalling System No. 1 protocol and similar signalling information conveyed via the ISDN User Part of Signalling System No. 7. The above relationship is described within the context of supporting the provision of basic bearer service for a call within an ISDN or mixed ISDN/non-ISDN environment.

##### 1.4 Relationship to other Recommendations

This Recommendation forms part of a set of interlocking ISDN service and signalling Recommendations. Other members of this set include the following:

- the operation of basic ISDN telephony teleservice and 64 kbit/s bearer service, which is supported in part via the interworking of the ISDN signalling systems described herein, is defined in detail in Recommendation Q. (basic service stage 2 description);
- the signalling messages and elements of procedure of layer of the Digital Subscriber Signalling

System No. 1 and the ISDN User Part of Signalling System No. 7 are defined in Q.930/931 (I.450/451) and Recommendations Q.761- Q.764 and Q.766, respectively.

Recommendations

## 2. Methodology

### 2.1 General

This chapter describes the methodology used to model and define interworking between the ISDN User Part and layer 3 of Digital Subscriber Signalling System No. 1. The methodology is based on the layer service concepts prescribed by the Reference Model of Open System Interconnection (OSI) for CCITT Applications (Recommendation X.200) and uses the terms and conventions defined in Recommendation X.210 (OSI Layer Service Definition Conventions).

Note 1 - The following coding is used:

- Bit 8: 1
- Bit 7-3: 00000
- Bit 2-1: Condition as follows:
  - 00 - Unknown
  - 01 - Permanent
  - 10 - Transient.

Note 2 - The format of the diagnostic field for causes number 57, 58 and 65 is as shown in Figure B-2/Q.699 and

Table B-2a/Q.699 to B-2b/Q.699.

Note 3 - Description in [ ] indicates current difference in description among Recommendations Q.931 and Q.763. Further alignment may be required for those cause values, i.e., #22, #29, #50, #69 and #99.
