ITU-T RECOMMENDATION SUMMARY		
------------------------------	--	--

Rec. No. : Q.731.1	Title : Stage 3 description for number identification supplementary services using signalling system No. 7
---------------------------	---

Study Group : XI - Switching and Signalling
--

Version : New	Date of adoption : 1992	Notes :
----------------------	--------------------------------	---------

DIRECT-DIALLING-IN (DDI)

Direct-Dialling-In (DDI) enables a user to call directly another user on an ISPBX or other private system without attendant intervention, the DDI digit(s) being the least significant digit(s) of the called ISDN number.

The stage 1 definition of DDI is to be found in Recommendation I.251. The stage 2 description is included in Recommendation Q.81.1. This stage 3 description of DDI compliments the ISDN User Part (ISUP) protocol as defined in Recommendations Q.761 to Q.764 and Q.766.

To order the complete text of this Recommendation, please use the Order Form for ITU-T Recommendations. An electronic version of this form is available on ITUDOC (Winword 2.0: UPI=ITU-5265; ASCII: UPI=ITU-2488)
