INTERNATIONAL TELECOMMUNICATION UNION

ITU-T RECOMMENDATION SUMMARY		
Rec. No. : Q.784	**Title :** ISUP basic call test specification	
Study Group : XI - Switching and Signalling		
Version : New	**Date of adoption :** 1991	Notes :

Recommendation Q.784 contains a detailed set of tests for the Signalling System No. 7 integrated services digital network User Part (ISUP). These tests are intended to validate the protocol specified in the Blue Book (1988) Recommendations Q.761-Q.764. Most tests contained in Recommendation Q.784 are applicable to the Recommendation Q.767 (1990). Recommendation Q.784 conforms to Recommendation Q.780 which describes the basic rules of the test specification.

The purpose of the test specification is to provide validation (conformity of a given implementation to the Recommendations Q.761 to Q.764) and compatibility of two implementation of Signalling System No. 7 ISUP.

To order the complete text of this Recommendation, please use the Order Form for ITU-T Recommendations. An

electronic version of this form is available on ITUDOC (Winword 2.0: UPI=ITU-5265; ASCII: UPI=ITU-2488)
