Note 1 – In cases where TLMAU provides DS, these TAPDU are mandatory.

Note 2 – A message may arrive at a TLM terminal as a result of either a Deliver–TAPDU or OutputMessage–TAPDU. The Deliver–TAPDU is applicable when delivery occurs directly to a TLM terminal. The OutputMessage–TAPDU is only applicable in the case that DS is subscribed.

10.1.3 *ExplicitReceive*

A TLM terminal sends an ExplicitRN–TAPDU to invoke the ExplicitReceive abstract operation. The TLMAU returns an ExplicitRNack–TAPDU to report the result of that operation, or may return an Exception–TAPDU (see § 10.1.1.3), to report an abstract error.

10.1.3.1

ExplicitRN–TAPDU

MessageDelete-TAPDU

```
MessageDelete-TAPDU ::= SEQUENCE {

        RetrievalIdentifier } } }
```

10.1.11

DSFetch

A TLM terminal sends an *OutputRequest-TAPDU* to invoke the *DSFetch* abstract operation. The TLMAU returns an *OutputMessage-TAPDU* to report the result of that operation, or may return an *Exception-TAPDU* (see § 10.1.1.3) to report an abstract error.

The *OutputMessage-TAPDU* is sent by TLMAU to be output the message from DS. This TAPDU is triggered by one of the following events:

- 1) some rule (not defined in this Recommendation) which causes TLMAU to establish a connection to the TLM terminal and to send a message at a specific time, for example, the TLM terminal has registered its times of availability with TLMAU;
- 2) the TLM terminal establishes a connection to TLMAU and initiates a CSCC which is taken as an implicit request for output by TLMAU;
- 3) receipt of an *OutputRequest-TAPDU*.

10.1.11.1

OutputRequest-TAPDU

The *OutputRequest-TAPDU* comprises following elements:

OutputRequest–TAPDU

```
OutputRequest–TAPDU ::= SEQUENCE {  
  [0]  
    outputRequest      OutputRequestTAPDUId,  
  [1] SET OF SEQUENCE {  
    [0] SEQUENCE {

      retrieval–id     RetrievalIdentifier },  
    [1] SEQUENCE {  
      deleteAfterOutput DeleteAfterOutputElementId,  
      delete–after–output DeleteAfterOutputValue } OPTIONAL } }
```

10.1.11.2

OutputMessage–TAPDU

The OutputMessage–TAPDU comprises following elements:

OutputMessage-TAPDU

OutputMessage-TAPDU ::= SEQUENCE {
 [0] SEQUENCE {
 outputMessage [0] OutputMessageTAPDUId,
 [1] SEQUENCE {
 quantityOfDocs QuantityOfDocsElementId,
 number-of-docs NumberOfAssociatedDocuments } OPTIONAL },

 message-type MessageTypeValue }
 [2] SEQUENCE {

 delivery-time DateandTime }
 — *The remaining Components of this TAPDU are identical to the components in the Deliver, DeliveryStatusNotice and ReceiptStatusNotice-TAPDU. The actual components to be used depend upon the MessageType parameter value specified in the MessageType component. } }*

Note – The RetrievalIdentifier is an identifier which identifies a message in DS.

10.1.12

MessageState

A TLM terminal sends a StatusQuery-TAPDU to invoke the MessageState abstract operation. The TLMAU returns a StatusReport-TAPDU to report the result of that operation, or returns an Exception-TAPDU to report an abstract error.
