

PopticsTwo (tm)
(c)1993, Patricia Lillie. All rights reserved.
Shareware: \$10.00

PopticsTwo is an original typeface, not copied or scanned from another source. It contains two all caps alphabets, numbers, basic symbols (\$, &, etc.), punctuation, and 52 dingbats. The letters are great for posters and flyers and make excellent drop caps. The dingbat collection is eclectic: snails, dinosaurs, kings, trashcans, and much more. There are over 500 kerned pairs.

The Poptics fonts were originally only released for the Macintosh. Because of the differences in encoding, translating them to the PC presented a few problems. To make sure you have access to all of the characters, I split them into two fonts each. The first contains the basic alpha-numeric characters. The "Extras" font has the 52 dingbat characters and a few alternates.

PopticsTwo is shareware. If you like, keep, and use this font, please send \$10.00 to Patricia Lillie; 1605 E. 46th St.; Ashtabula, OH; 44004. (Thank you to all of you wonderful people who registered PopticsOne!)

Feel free to share this font with others, but please include this documentation.

Thanks,
Patricia Lillie
