

Duke Nukem 3D Still Image Screen Saver (Image Carousel - D3D Edition)

Image Carousel

Image Carousel is the screen saver module which manages and displays the still image files.

Options:

- **Password Protection** - This option selects whether or not you would like to have your screen saver password protected. If this option is checked, then the screen saver will not deactivate unless the proper password is entered. All screen savers use the same system-level password -- individual screen savers do not each have their own password, but rather any new screen saver will reference the same password already set on your system. Whatever password you set for any module becomes the password for all modules with the Password Protected option box checked.
- **Fade Style** - This option selects one of the several transition effects between images. Choices include Random, Block Fade, Horizontal Blind, Vertical Blind, Horizontal Wipe, Vertical Wipe, Circular Wipe and Pixel Fade. The Random selection will cycle a different fade style for each image.
- **Delay Between Images** - This sets the length of time each still image is displayed on the screen.
- **Image Options**
 - Show All** - This checkbox, if checked (or X'd), will automatically "select" all images in the Image directory to be displayed. If not checked, the "Select Images" option will be active.
 - Select Images** - This selection allows you to do several things, functioning as a mini file management utility.
 - Add** - This is how you select image files to be displayed. Select the desired .img file under the "Available" column by clicking on it to highlight it. If you want to view the file before selecting it, click "Preview" for a thumbnail view of the file. Click "Add" to select the file. It will appear under the "Selected" column.
 - Remove** - Highlight the files under the "Selected" column that you wish to de-select. Click the "Remove" button, and the files will disappear from the "Selected" column. Please note that this function does not actually delete an image file (unlike the "Delete File" function,) but de-selects it only.
 - Delete File** - This function operates on files listed in either the "Selected" or "Available" columns, and will physically delete selected image files from the drive. If single or multiple files are selected by highlighting, just click the "Delete File" button. A dialog box will pop up to ask if you are sure you want to delete the selected files.
 - Install** - This option, like the "Delete File" option, is primarily for moving .IMG files back and forth from storage media to the Hard Drive. (When installing from the original disks, all available files are automatically installed onto the hard drive, so you may not need to use this option unless you have removed image/sound files off your hard drive and wish to reinstall them. To move additional image files from the storage media, click "Install." Select the drive

letter and directory. The installable files will appear on the left, under the "Files:" column. Highlight the files you want to select and click the "Install" button. The files will be copied from the storage media to the images directory on your hard drive.

After completing any configuration operations in "Select Images," click the "OK" button to save your settings and return to the main options window.

- **Image Directory** - This allows you to change the directory from which Image Carousel reads image files. Normally you will not want to change this, but if you purchase additional products using Image Carousel, and need to store different image files in separate directories, this option allows a quick, easy way to reconfigure.

If you have a modem, you can obtain updates of Image Carousel by calling the Rhode Island Soft Systems (RISS) BBS, at (401) 767-3931. On CompuServe, just **GO RISS**, and check Library 5. On the internet, you can view our web site at <http://www.risoftsystems.com>
