

Using student barcode information for monitoring student attendance in large groups

Dr Paul Gent

School of Biomedical
Sciences University of
Leeds

j.p.gent@leeds.ac.uk

Project aims

- Implement a system to capture and publish student attendance records in large practical classes and lectures
- Monitor student attendance

Project outcomes

- Working system which scans a student card within lectures and practical classes and records student attendance details into a database
- Separate program monitors the classes and the database to produce email reports to staff and students where attendance was unsatisfactory
- The source code, documentation and executables are available for download and installation
