## Chapter 1

# README

### 1.1 Recent Submissions and Other Useful Material

This is the root directory of the file tree that contains all the accumulated material off the first 7 FreshFish CD's. Much of this material was never included in the first 1000 floppy disks for several reasons, including the fact that there have been four CD releases since floppy disk 1000 was released, and much of this material is simply too large for a floppy release.

For a quick overview of this material, see the INDEX file, which contains a one-line entry for each program, including the name of the program, version number, and short description.

To quickly locate material for which you know the name, see the LOCATE file. The LOCATE file is the same as the INDEX file, except instead of having a short description, it includes the full path to the material you wish to locate.

If you wish to get detailed information about a particular program, see the CONTENTS file, which is automatically generated from the product info files and contains most of the interesting information about each program.
