CREATOR2™

1.6.2 Quick Updater Guide

Note to Creator2 1.5–1.6.1 users: These instructions show you how to upgrade to Creator2 1.6.2 and retain the preferences you set in 1.5–1.6.1. These instructions also show you how to do a Custom Install of the Border Editor from the Full Installer.

1. Insert the Creator 2 1.6.2 CD into your CD-ROM drive and double-click the CD icon.

2. Double-click the **Creator2 1.6.2 Updater** icon.

3. Click **Continue**.

4. The **Read Me** screen is displayed. This file has important late-breaking information for you. After updating, you will find it in the Multi-Ad Creator2 folder. Click **Continue**.

5. In the Updater window, specify a **location** for the updated program files:

• If you have only one copy of Creator2 1.5–1.6.1 on your system, then accept the default update location.

• If you have more than one copy of Creator2 1.5–1.6.1 on your system, then click on Select Folder. A Select File window appears, listing all Creator2 1.5–1.6.1 applications and the folders in which they are located. Select the application you wish to update and click OK.

6. Click **Update**. A progress bar appears telling you when items are placed on your Macintosh. If you need to halt the update, click **Stop**.

7. Your Creator2 1.5–1.6.1 application is updated to Creator2 1.6.2! Click **Quit**.

8. To ensure that you are running versions of **ColorSync**® and **Adobe Type Manager**® **(ATM)** that are compatible with your Mac OS, read the notes about ColorSync and ATM compatibility in the "About this CD.pdf" or in the Read Me.

9. If you purchased the upgrade for Creator2 1.6.2 with the **Border Editor**, you may now do a **Custom Install** from the Creator2 1.6.2 Full Installer and select only the Utilities checkbox (which includes the Border Editor).

Note: If you choose Easy Install instead of Custom Install from the Creator2 1.6.2 Full Installer, then you will be prompted for a serial number when launching Creator2 1.6.2. Simply enter your 1.5, 1.6, or 1.6.1 serial number at this time.
