Newton Connection Kit: Restoring Data

Article Created: 30 July 1993

TOPIC --

This article discusses restoring information to your Newton from files saved
to your Macintosh.

DISCUSSION --

If you lose some or all of the information on your Newton, you can restore
from the files created during synchronization with your Macintosh.

Note: Using the Restore function erases everything on your Newton and replaces
it with the file from the Macintosh.

To restore:

1) Connect your Newton to your Macintosh.

2) Double-click the Newton Connection icon on the Macintosh.

3) Click the Restore button.

4) In the dialog box that appears, choose the file you want to restore, and
   click Open.

5) On your Newton, tap the Extras button.

6) In the box that appears, choose serial or LocalTalk.

7) Tap Connect to initiate restoration.

Restoring Specific Items

You may want to retrieve certain items from past synchronizations that no
longer exist in the latest synchronized file. You may use the Archive file to
amend the latest synchronized file on the Macintosh, then synchronize again to
transfer those changes to the Newton.

To do this:

1) On the Macintosh, choose Open from the Newton Connection File menu.

2) Open the latest synchronized file (It will be called either Newton or bear
   your name).

3) In the window that appears, click the application where you want to put the
   recovered information.

4) Choose Open from the File menu.

5) Open the archive that contains the information you want to recover.

6) In the window that appears, open the application that contains the
   information you want.

7) In the archive window, select the information you want to put back into
   your Newton. Choose Copy from the Edit menu.

8) Click the window of the synchronized file, then choose Paste from the Edit
   menu.

9) Synchronize with your Newton.
