

## Newton MessagePad: 0011 Prefix Before Phone Number

Article Created: 15 November 1993

TOPIC -----

When I use the Assist button to place a phone call, the numbers '0011' are inserted before the phone number.

How can I stop this from happening?

DISCUSSION -----

The numbers '0011' are being inserted in the Assist slip because your Newton MessagePad thinks this is an international call.

When you set your Country preference in your Personal Preferences, you must tap Country, then select a country from the list that appears.

If you write the country name in the Country preference blank instead of selecting from the list, your MessagePad will not understand what country you are in and this problem will occur.
