Runner

General Instructions

Runner is a progam runner for Windows. To run a program just enter it's full name and path in the Command Line window. Check the Minimized check box if you would like the program to start in the iconized state. Ok runs the program. Cancel closes Runner.

Runner supports file associations. Entering a file with and extension not equal to EXE causes Runner to search the [Extensions] section of you WIN.INI file. In this section filename extensions are associated with a certain program. For example, a DOC externsion might be associated with a word processor. In this example entering a DOC filename into Runner will cause your word processor to be executed with the DOC file as a parameter. You can easily examine and or edit your WIN.INI file using the Windows supplied program SysEdit. For more information see your Window's User Guide.

Registration

Runner is shareware. If you find Runner useful, a registration of $10 would be appreciated. Registered users will receive the latest version of Runner. Please send registrations to the following address.

Lucas Systems
45 Garden Street #4
Boston, MA 02114

CompuServe 74130,2453

Registered users will receive the next version of Runner.

Questions, suggestions and/or comments are welcome

Distribution

You are free to distribute Runner as long as you do so in its original unmodified form. The following files are required.

> Runner.exe
> Runner.hlp
> Runner.txt
