

Butterworth and Chebyshev crystal ladder filter calculator, Dan Halbert, KB1RT

See May 1982 QST, "A unified approach to the design of crystal ladder filters", by Wes H
This spreadsheet is initially loaded with data from the example in that article.

The May 1982 QST article has one typo in it, for Butterworth N=4, k_23. The correct val

Given crystal characteristics

=> 294 delta_f (Hz): crystal bandwidth =>
=> 23 R_s (ohms): crystal series-loss resistance =>
=> 3.577 F_0 (MHz): crystal center frequency
5 C_p (assumption, not used in these calculations)

Calculated crystal characteristics

N= number of filter sections

63478.261 Q_u: unloaded Q
3.0468633E-14 C_m (F) value is possible with the given characteristics
