[Split Operation](#)

Split Operation (Registered Copies Only)

Split operation is possible in VFO mode on all supported transceivers.

When you click the  button in VFO mode, the Active vfo becomes the **receive vfo** and the Inactive vfo becomes the **transmit vfo**. Both are now displayed in the Active panel.

To return to simplex operation, click the Split button again. Until you toggle split off you will not be able to select a different source

Split operation is also available in Memory mode as follows:

TS-440S	channels 90-99
TS-140S	channels 10-19
TS-50/450/850/950S	channels 00-89.

When you tune to any of those channels Kentrol will automatically show both its receive and transmit settings if they are different.

Scroll button

Clicking the  button steps the coarse tuning scroll bar upward through its current range, tuning the Tunable Source. When it gets to the top of the range, it automatically starts over at the bottom. You can change range, band or source while autoscrolling.

Steps through all filled channels if MEM is tunable, skipping channels that are blank or set to 100 kHz am, which Kentrol uses as a filler setting.

When scrolling one of the VFOs the tuning step that Kentrol uses depends on the mode, the bandsread, and the fine tuning step. If the mode is CW or FSK, Kentrol uses both scroll bars and a step of 500 Hz (100 Hz if that is your fine tuning step). For all other modes, only the coarse tuning bar is used, with a step of 1 kHz or more. It is more than 1 kHz only at Sub bandsread in the broadcast bands.

Related Topics

[Radio Operation](#)

Spread - Wide

This is the default range.

The Coarse Tuning scroll bar tunes from 100 kHz to 29,999 kHz. Click its end arrows for 1 kHz steps, or the bar itself for 10 kHz steps. Jumping up or down (vertical arrow buttons) shifts the frequency by exactly 1 MHz.

Related Topics

[Spread - 1 MHz](#)

[Spread - Band](#)

[Spread - Sub](#)

[Coarse Tuning](#)

[Fine Tuning](#)

[Radio Operation](#)

Spread - Band

If the currently active frequency is within a band that Kentrol knows about, clicking on the **Band** button sets the main scroll bar to the width of the band and labels it appropriately. If you aren't within a recognized band, the bandsread defaults to Wide.

Click the end arrows for 1 kHz steps, or bar for 10 kHz steps.

Bands are grouped into **services**. Kentrol has several services built in:

- broadcasting,
- amateur,
- time signals,
- aeronautical (voice only),
- marine (voice only)

Jumping goes to the next band up or down in the same service. In amateur and broadcast bands Kentrol remembers the last frequency you tuned before you changed bands and automatically restores it when you return. When you close a radio, last tuned settings are saved and loaded next session.

[Spread - Sub](#)

[Spread - Wide](#)

[Coarse Tuning](#)

[Fine Tuning](#)

[Radio Operation](#)

Spread - Sub

The **Sub** button gives Kentrol control of mode and tuning step if clicked while you are tuned to a frequency within a recognized band. To change modes or tune between steps, click on one of the other Spread buttons.

In the Ham, Aero and Marine services **Sub** also re-sets the main scroll bar to whichever sub-band the current frequency falls within. Sub-bands in the ham bands follow US/Can/JA/Region 1 band plans for HF.

Tuning step is 9/10 kHz in the MW broadcast band, 5 kHz in the SW broadcast bands, 3 kHz for Aero Route and Marine Phone sub-bands and 1 kHz elsewhere. Clicking on the bar moves 10 steps.

Jumping up or down goes to the next matching sub-band within the current service. Kentrol remembers the last frequency you tuned before you changed bands and automatically restores it when you return

[Coarse Tuning](#)

[Fine Tuning](#)

[Radio Operation](#)

Jump: Up/Dn

The double-pointed vertical arrow button above the middle of the Coarse Tuning scroll bar allows you to jump up and down the radio's frequency range. How jumping works depends on the Spread chosen.

When the Spread is Band or Sub, jumping is within the current service. Jumping up from the highest band loops to the lowest, and vice versa. Kentrol remembers the last frequency you tuned before you changed bands and automatically restores it when you return

When using the Wideband or 1 MHz Spread, the jump is up/down 1 MHz. The 1 MHz range is automatically shifted by the same amount.

The Jump button is not available in memory mode.

[Radio Operation](#)

Tunable Source

There are 3 sources: vfo A, vfo B and Mem. The source with its radio button ON is Tunable. The Tunable Source is controlled by the scroll bars in the Tuner Window. By default the Active source is tunable. To make another source tunable, click its radio button.

Related Topics

[Active Source](#)

[Inactive Sources](#)

[Split Operation](#)

[Radio Operation](#)

Fine Tuning

The main scroll bar tunes to 1 kHz resolution. The Fine Tuning bar can be set to several steps. The default fine tuning step is 10 Hz, with 100 Hz if you click the bar. An ultrafine step of 1 Hz with 10 Hz is only available with 50-series radios. Steps of 100 Hz and 500 Hz are handy for tuning narrowband modes. The wide steps apply whether you click the arrows or the bar.

When you get to either end of the fine tuning bar and click again, it moves the main (coarse) tuning bar one click and resets the fine tuning bar accordingly. This allows you to cover as much of the spectrum as you want without having to coarse tune manually.

Fine Tuning is not available when MEM is the tunable source.

Related Topics

[Coarse Tuning](#)

[Radio Operation](#)

Keyboard Tuning

Just enter the frequency you want directly into the combo box on the toolbar. When you hit < enter > or click the arrow to the right of the box, the rig is instantly set to your selection. Frequency can be entered in MHz, kHz or Hz, and Kentrol will figure out which is which. You can use as many or few decimal places as you want, with one exception; frequencies in MHz *must* be entered with a decimal point, because Kentrol assumes that any number below 100 without a decimal point is a memory channel number.

If one of the vfos is active when you enter a frequency, that vfo is tuned to the new frequency. If you enter a frequency while Mem is active, the new frequency will be entered into vfo A, which will be made active.

Related Topics

Radio Operation

Serial Port (Radio Setup dialog)

Use any ports COM1 to COM4, so long as Windows knows where they are.

[Related Topics](#)

Upload command (File menu)

Loads the memory set in the active window into the radio, starting at channel 00 and continuing until the radio is full. For most models the last channel is 99, but its 39 in a TS-940S and 30 in the TS-140/680S.

After the file is uploaded, you will want to update the Memories window of your radio by choosing the appropriate command on the Options Menu. In most cases this will be Update Memories. But if youve uploaded a file of fax mode memories and want to preserve their offset, choose Update as Fax.

Related Topics

Memory sets

Download command (File menu)

Reads the contents of the radio memories to an open Memory Set Window, then gives it the focus. You can then add notes. This command does NOT save to a file; use the Save command.

Related Topics

[Memory sets](#)

Log button

Adds records to a tab-separated ASCII text log file, which you select or create when you configure a radio.

UTC date and time, frequency, band and mode , plus signal on 50-series radios, are read directly from the radio by Kentrol. You are prompted for text, which you can organize into as many or as few fields as you want by using '\ ' as a separator. Kentrol converts the '\ ' to a TAB, which Windows won't allow you to type in directly.

Related Topics

BandBox

When you select a service (ham cw, ham phone, ham digital, broadcast, time signal, aero, or marine) Kentrol instantly takes you to it, by:

- setting the active frequency to the next band (up) of that service;
- setting the active mode as appropriate for that frequency;
- setting the Spread tuning range to Sub.

From that point you can use the Jump buttons to move to higher or lower bands within that service, use the scroll bar to move to another part of the band

Related Topics

[Radio Operation](#)

Region (Radio Setup dialog)

Frequency allocations ('bands') are set by the ITU for 3 world regions:

Region I includes Europe, Africa, Middle East, part of Asia

Region II covers the Americas, plus Hawaii

Region III is most of Asia and the Pacific.

When operating with bandspread set to **Band**, Kentrol knows the correct bands to use for each Region. If you select the USA or Canada you get the Region II bands; select Japan and get Region III bands. If you choose Region I, that's what you get. The default is USA.

Compared to the default Region II, Region I has the additional Longwave, 75m and 41m broadcast bands, narrower 40m, 80m and 160m ham bands, and 9kHz channel spacing on lw and mw. Region III has all of those except longwave. Medium wave spacing in Region II is 10kHz.

It is left to national authorities to decide how the ITU ham bands should be divided into sub-bands. Usually these are partly official (e.g. cw/phone) and partly voluntary (e.g. sstv/rtty). In Canada all ham sub-bands are voluntary. Kentrol's **Sub** bandspread provides access to the complete sub-band structures for Canada, the USA and Japan. For users in Region I, a generic set of sub-bands is provided.

Kentrol's USA sub-band set largely follows the band plan recommended in the ARRL Operating Manual, 4th Edition. The Canada set similarly follows the latest version of the RAC suggested band plan for HF. Where Kentrol differs from those plans is mostly in designating digital sub-bands. General practice allows digital modes more space than the ARRL/RAC plans, so Kentrol reflects general practice.

Your choice is stored in the kentrol.ini file and is used each time the program loads.

[Related Topics](#)

[Memory sets](#)

Reset command (Options menu)

If Kentrol gets 'out of touch' with your radio and shows ERR or 0's in the display, choose Reset. This command causes Kentrol to query the radio twice for settings information as though it had been re-started, and will usually re-establish the link between computer and radio.

Related Topics

Spread - Sub

Hot Spots

Hot Spots are frequencies that you store temporarily for instant recall. Such short-term storage facilities are often called 'scratch' memories; on scanners they are usually called monitor channels. In Kentrol, Hot Spots are stored in the combo box on the toolbar.

Type a frequency into the box's edit control or click the button on the left of the box to automatically store the current frequency. The last eight frequencies stored are saved between sessions and reloaded.

To tune to a stored frequency, select it from the combo box's list. When you click the arrow on the right of the box or type <enter>, the radio is automatically tuned to the selected frequency.

Related Topics

[Radio Operation](#)

[Toolbar](#)

Mode Setting

The edit window of the Mode combo box in the lower left of the tuner window always shows the mode of the current active source. Clicking on the arrow beside the box opens the list of possible modes. Select the one you want via mouse or keyboard, then click the arrow again to close the list. If you prefer, you can just type the mode by name into the edit window and the selection will follow your typing.

Fax Mode is a Kentrol exclusive. Select fax as your mode and Kentrol automatically sets the sideband and filters and provides the correct (centre tuning) offset. Tune listed frequencies directly.

In FSK mode Kentrol automatically provides the correct (mark tuning) offset, even on 40-series rigs which display the carrier frequency. FSK mode on the 140/680 and TS-50 is exclusive to Kentrol.

Related Topics

[Radio Operation](#)

Filter Selection('50-series)

On all '50-series Kenwood rigs except the TS-50, the IF filters can be selected via the computer, and the first (8 MHz) and second (455 kHz) IF filters can be set independently of each other.

The edit windows of the two filter selection combo boxes show the filters currently in use. Changing filters is a simple matter of clicking on the appropriate arrow to open its list box, then clicking on your choice.

Related Topics

[Radio Operation](#)

Coarse Tuning

The main scroll bar in the tuner window is used for coarse tuning. One step on this scale is 1 kHz or more, depending on the bandspread chosen. The current step is shown above the right (high) end of the scroll bar. Like all tuner window actions, coarse tuning is applied to the tunable source.

<u>Save As</u>	Saves an opened object to a specified file name.
<u>Upload</u>	Loads an open memory set into the radio.
<u>Download</u>	Reads the current radio memories into an open window.
<u>Print</u>	Prints an object. <i>(Registered Copies Only)</i>
<u>Print Preview</u>	Displays the object on the screen as it would appear printed.
<u>Page Setup</u>	Insert headers and footers.
<u>Printer Setup</u>	Selects a printer and printer connection.
<u>Exit</u>	Exits Kentrol.

Edit menu commands

The Edit menu offers the following commands:

<u>Undo</u>	Reverse previous editing operation.
<u>Cut</u>	Deletes data from a document and moves it to the clipboard.
<u>Copy</u>	Copies data from a document to the clipboard.
<u>Paste</u>	Pastes data from the clipboard into a document.
<u>Paste Link</u>	Pastes from the clipboard a link to data in another application.
<u>Links</u>	List and edit links to embedded objects.

View menu commands

The View menu offers the following commands:

<u>Toolbar</u>	Shows or hides the toolbar.
<u>BandBox</u>	Shows or hides the floating bandbox.

Window menu commands

The Window menu offers the following commands, which enable you to arrange multiple views of multiple objects in the application window:

<u>Cascade</u>	Arranges windows in an overlapped fashion.
<u>Tile</u>	Arranges windows in non-overlapped tiles.
<u>Arrange Icons</u>	Arranges icons of closed windows.
<u>Window 1, 2, ...</u>	Goes to specified window.

Options menu commands

<u>Fine Tuning Step</u>	Select 1, 10, 100, 500 Hz fine tuning step.
<u>Radio Setup Update</u>	Set Parameters for the current radio Refresh Memories window from current radio
<u>Memories Update as Fax Reset</u>	Refresh Memories, applying fax mode offset Refresh Tuner window from the current radio

Help menu commands

The Help menu offers the following commands, which provide you assistance with this application:

<u>Index</u>	Offers you an index to topics on which you can get help.
<u>Using</u>	Provides general instructions on using help.
<u>Help</u>	
<u>About</u>	Displays the version number of this application.

New command (File menu)

Use this command to create a new object in Kentrol. That object can be a radio configuration, a memory set, or a log. Select the type of new file you want to create in the File New dialog box.

You can open an existing object with the Open command.

Shortcuts

Toolbar: 
Keys: CTRL+N

File New dialog box

Specify the type of object you wish to create:

Radio creates a new radio configuration object. You will be prompted for the serial port through which it will initialize itself.

Memories creates a blank memory set.

Log opens a blank text window. If you then save it as a .LOG file Kentrol can recognize it.

Open command (File menu)

Use this command to open an existing object in a new window. In the File Open Dialog Kentrol lets you choose among object types. You can open multiple objects at once. Use the Window 1, 2, ... command on the Window menu to switch among the multiple open objects.

You can create new objects with the New command.

Shortcuts

Toolbar:

Keys: CTRL+O

File Open dialog box

The following options allow you to specify which file to open:

File Name

Type or select the filename you want to open. This box lists files with the extension you select in the List Files of Type box.

List Files of Type

Select the type of file you want to open:

*.**RAD** files contain radio configurations. Before you open a *.RAD file, connect the radio.

*.**KTM** files contain memory sets, usually with notes. You can use a *.ktm file from any radio.

*.**LOG** files contain loggings saved in pure ASCII database format.

Drives

Select the drive in which Kentrol stores the file that you want to open.

Directories

Select the directory in which Kentrol stores the file that you want to open.

Close command (File menu)

Use this command to close all windows containing the active object. Kentrol suggests that you save changes to your object before you close it. If you close an object without saving, you lose all changes made since the last time you saved it. Before closing an untitled object, Kentrol displays the Save As dialog box and suggests that you name and save the object.

You can also close an object by using the Close icon on the object's window, as shown below:

Save command (File menu)

Use this command to save the active object to its current name and directory. When you save an object for the first time, Kentrol displays the Save As dialog box so you can name your object. If you want to change the name and directory of an existing object before you save it, choose the Save As command.

Shortcuts

Toolbar: 
Keys: CTRL+S

Save As command (File menu)

Use this command to save and name the active object. Kentrol displays the Save As dialog box so you can name your object.

To save an object with its existing name and directory, use the Save command.

File Save As dialog box

The following options allow you to specify the name and location of the file you're about to save:

File Name

Type a new filename to save an object with a different name. A filename can contain up to eight characters and an extension of up to three characters. Kentrol adds the extension you specify in the Save File As Type box.

Drives

Select the drive in which you want to store the object.

Directories

Select the directory in which you want to store the object.

1, 2, 3, 4 command (File menu)

Use the numbers and filenames listed at the bottom of the File menu to open the last four objects you closed. Choose the number that corresponds with the object you want to open.

Exit command (File menu)

Use this command to end your Kentrol session. You can also use the Close command on the application Control menu. Kentrol prompts you to save objects with unsaved changes.

Shortcuts

Mouse: Double-click the application's Control menu button.

Keys: ALT+F4

Undo/Can't Undo command (Edit menu)

<< Your application's user interface for Undo may differ from the one described below. Modify this help text accordingly. >>

Use this command to reverse the last editing action, if possible. The name of the command changes, depending on what the last action was. The Undo command changes to Can't Undo on the menu if you cannot reverse your last action.

Shortcuts

Toolbar:

Keys: CTRL+Z or
ALT-BACKSPACE

Redo command (Edit menu)

<< Write application-specific help here. >>

Cut command (Edit menu)

Use this command to remove the currently selected data from the object and put it on the clipboard. This command is unavailable if there is no data currently selected.

Cutting data to the clipboard replaces the contents previously stored there.

Shortcuts

Toolbar: 
Keys: CTRL+X

Copy command (Edit menu)

Use this command to copy selected data onto the clipboard. This command is unavailable if there is no data currently selected.

Copying data to the clipboard replaces the contents previously stored there.

Shortcuts

Toolbar: 
Keys: CTRL+C

Paste command (Edit menu)

Use this command to insert a copy of the clipboard contents at the insertion point. This command is unavailable if the clipboard is empty.

Shortcuts

Toolbar: 
Keys: CTRL+V

Toolbar command (View menu)

Use this command to display and hide the Toolbar, which includes buttons for some of the most common commands in Kentrol, such as Source selection, Transmit. A check mark appears next to the menu item when the Toolbar is displayed.

See [Toolbar](#) for help on using the toolbar.

Toolbar

The toolbar is displayed across the top of the application window, below the menu bar. The toolbar provides quick mouse access to many tools used in Kentrol,

To hide or display the Toolbar, choose Toolbar from the View menu (ALT, V, T).

<< Add or remove toolbar buttons from the list below according to which ones your application offers. >>

Click To

Open a new object. Kentrol displays the New dialog box, in which you can choose the desired object type: Radio, Memory Set or Log.

Open an existing object. Kentrol displays the Open dialog box, in which you can locate and open the desired file.

Save the active object with its current name. If you have not named the object, Kentrol displays the Save As dialog box.

Print the active object. Available for Memory Sets and Logs only.

Remove selected text from the object and stores it on the clipboard.

Copy the selection to the clipboard.

Insert the contents of the clipboard at the insertion point.

Reverse the last editing. Note: You cannot undo some actions.

See [Status Bar](#) for help on using the status bar.

Status Bar

The status bar is displayed at the bottom of the Kentrol window. To display or hide the status bar, use the Status Bar command in the View menu.

The left area of the status bar describes actions of menu items as you use the arrow keys to navigate through menus. This area similarly shows messages that describe the actions of toolbar buttons as you depress them, before releasing them. If after viewing the description of the toolbar button command you wish not to execute the command, then release the mouse button while the pointer is off the toolbar button.

The right areas of the status bar indicate which of the following keys are latched down:

Indicator	Description
CAP	The Caps Lock key is latched down.
NUM	The Num Lock key is latched down.
SCRL	The Scroll Lock key is latched down.

New command (Window menu)

Use this command to open a new window with the same contents as the active window. You can open multiple object windows to display different parts or views of an object at the same time. If you change the contents in one window, all other windows containing the same object reflect those changes. When you open a new window, it becomes the active window and is displayed on top of all other open windows.

Cascade command (Window menu)

Use this command to arrange multiple opened windows in an overlapped fashion.

Tile command (Window menu)

Use this command to arrange multiple opened windows in a non-overlapped fashion.

Tile Horizontal command (Window menu)

Use this command to vertically arrange multiple opened windows in a non-overlapped fashion.

Tile Vertical command (Window menu)

Use this command to arrange multiple opened windows side by side.

Window Arrange Icons Command

Use this command to arrange the icons for minimized windows at the bottom of the main window. If there is an open object window at the bottom of the main window, then some or all of the icons may not be visible because they will be underneath this object window.

1, 2, ... command (Window menu)

Kontrol displays a list of currently open object windows at the bottom of the Window menu. A check mark appears in front of the object name of the active window. Choose an object from this list to make its window active.

Index command (Help menu)

Use this command to display the opening screen of Help. From the opening screen, you can jump to step-by-step instructions for using Kentrol and various types of reference information.

Once you open Help, you can click the Contents button whenever you want to return to the opening screen.

Using Help command (Help menu)

Use this command for instructions about using Help.

About command (Help menu)

Use this command to display the copyright notice and version number of your copy of Kentrol.

Context Help command

Use the Context Help command to obtain help on some portion of Kentrol. When you choose the Toolbar's Context Help button, the mouse pointer will change to an arrow and question mark. Then click somewhere in the Kentrol window, such as another Toolbar button. The Help topic will be shown for the item you clicked.

Shortcut

Keys: SHIFT+F1

Title Bar

<< Show your application's title bar here. >>

The title bar is located along the top of a window. It contains the name of the application and object.

To move the window, drag the title bar. Note: You can also move dialog boxes by dragging their title bars.

A title bar may contain the following elements:

- Application Control-menu button
- Object Control-menu button
- Maximize button
- Minimize button
- Name of the application
- Name of the object
- Restore button

Scroll bars

Displayed at the right and bottom edges of the object window. The scroll boxes inside the scroll bars indicate your vertical and horizontal location in the object. You can use the mouse to scroll to other parts of the object.

Size command (System menu)

Use this command to display a four-headed arrow so you can size the active window with the arrow keys.

After the pointer changes to the four-headed arrow:

1. Press one of the DIRECTION keys (left, right, up, or down arrow key) to move the pointer to the border you want to move.
2. Press a DIRECTION key to move the border.
3. Press ENTER when the window is the size you want.

Note: This command is unavailable if you maximize the window.

Shortcut

Mouse: Drag the size bars at the corners or edges of the window.

Move command (Control menu)

Use this command to display a four-headed arrow so you can move the active window or dialog box with the arrow keys.

Note: This command is unavailable if you maximize the window.

Shortcut

Keys: CTRL+F7

Minimize command (application Control menu)

Use this command to reduce the Kentrol window to an icon.

Shortcut

Mouse: Click the minimize icon  on the title bar.
Keys: ALT+F9

Maximize command (System menu)

Use this command to enlarge the active window to fill the available space.

Shortcut

Mouse: Click the maximize icon  on the title bar; or double-click the title bar.
Keys: CTRL+F10 enlarges an object window.

Next Window command (object Control menu)

Use this command to switch to the next open object window. Kentrol determines which window is next according to the order in which you opened the windows.

Shortcut

Keys: CTRL+F6

Previous Window command (object Control menu)

Use this command to switch to the previous open object window. Kentrol determines which window is previous according to the order in which you opened the windows.

Shortcut

Keys: SHIFT+CTRL+F6

Close command (Control menus)

Use this command to close the active window or dialog box.

Double-clicking a Control-menu box is the same as choosing the Close command.

Note: If you have multiple windows open for a single object, the Close command on the object Control menu closes only one window at a time. You can close all windows at once with the Close command on the File menu.

Shortcuts

Keys: CTRL+F4 closes an object window
 ALT+F4 closes the <<YourType>> window or dialog box

Restore command (Control menu)

Use this command to return the active window to its size and position before you chose the Maximize or Minimize command.

Switch to command (application Control menu)

Use this command to display a list of all open applications. Use this "Task List" to switch to or close an application on the list.

Shortcut

Keys: CTRL+ESC

Dialog Box Options

When you choose the Switch To command, you will be presented with a dialog box with the following options:

Task List

Select the application you want to switch to or close.

Switch To

Makes the selected application active.

End Task

Closes the selected application.

Cancel

Closes the Task List box.

Cascade

Arranges open applications so they overlap and you can see each title bar. This option does not affect applications reduced to icons.

Tile

Arranges open applications into windows that do not overlap. This option does not affect applications reduced to icons.

Arrange Icons

Arranges the icons of all minimized applications across the bottom of the screen.

Ruler command (View menu)

Choose Font dialog box

Choose Color dialog box

Find command (Edit menu)

Find dialog box

Replace command (Edit menu)

Replace dialog box

Repeat command (Edit menu)

Use this command to repeat the last editing command carried out. The Repeat menu item changes to Can't Repeat if you cannot repeat your last action.

Shortcut

Key: F4

Clear command (Edit menu)

Clear All command (Edit menu)

Next Pane

Prev Pane

No Help Available

No help is available for this area of the window.

No Help Available

No help is available for this message box.

Print command (File menu)

Use this command to print a document, which may be either a memory set or a log. This command presents a Print dialog box, where you may specify the range of pages to be printed, the number of copies, the destination printer, and other printer setup options.

Shortcuts

Toolbar: 
Keys: CTRL+P

Print dialog box

The following options allow you to specify how the document should be printed:

Printer

This is the active printer and printer connection. Choose the Setup option to change the printer and printer connection.

Setup

Displays a Print Setup dialog box, so you can select a printer and printer connection.

Print Range

Specify the pages you want to print:

All Prints the entire document.

Selectio Prints the currently selected text.

n

Pages Prints the range of pages you specify in the From and To boxes.

Copies

Specify the number of copies you want to print for the above page range.

Collate Copies

Prints copies in page number order, instead of separated multiple copies of each page.

Print Quality

Select the quality of the printing. Generally, lower quality printing takes less time to produce.

Print Progress Dialog

The Printing dialog box is shown during the time that Kentrol is sending output to the printer. The page number indicates the progress of the printing.

To abort printing, choose Cancel.

Print Preview command (File menu)

Use this command to display the active document as it would appear when printed. When you choose this command, the main window will be replaced with a print preview window in which one or two pages will be displayed in their printed format. The print preview toolbar offers you options to view either one or two pages at a time; move back and forth through the document; zoom in and out of pages; and initiate a print job.

Print Preview toolbar

The print preview toolbar offers you the following options:

Print

Bring up the print dialog box, to start a print job.

Next Page

Preview the next printed page.

Prev Page

Preview the previous printed page.

One Page / Two Page

Preview one or two printed pages at a time.

Zoom In

Take a closer look at the printed page.

Zoom Out

Take a larger look at the printed page.

Close

Return from print preview to the editing window.

Printer Setup command (File menu)

Use this command to select a printer and a printer connection. This command presents a Printer Setup dialog box, where you specify the printer and its connection.

Printer Setup dialog box

The following options allow you to select the destination printer and its connection.

Printer

Select the printer you want to use. Choose the Default Printer; or choose the Specific Printer option and select one of the current installed printers shown in the box. You install printers and configure ports using the Windows Control Panel.

Orientation

Choose Portrait or Landscape.

Paper Size

Select the size of paper that the document is to be printed on.

Paper Source

Some printers offer multiple trays for different paper sources. Specify the tray here.

Options

Displays a dialog box where you can make additional choices about printing, specific to the type of printer you have selected.

Network...

Choose this button to connect to a network location, assigning it a new drive letter.

Page Setup command (File menu)

Displays a dialog box where you can choose to include filenames, page numbers and dates in either headers or footers on your printed output.
