

This program should be used BEFORE going to version 7.0 of the CHKBOOK program. It converts your current ISAM files to Paradox tables for use in the new version. Your ISAM files will be brought up to date if they are not version 6.9 format.

Copy winisam.dll, pxengwin.dll to your main Windows directory. REPLACE any old version of winisam.dll you may have from previous versions. If you already have the Borland Paradox Engine, you do not need pxengwin.dll, you already have it.

Copy convert.exe into the same directory as your ACCOUNT isam data set (usually the same directory you ran chkbook.exe from).

To run, either install as a program in the Windows program manager or select run from the file menu and select convert.exe.

This program will run under Windows 3.0 or 3.1.
